## How to Capture Video from Your Screen?

If you start software, select some menus, move the cursor, type some text - anything you see on the screen - **Screen Recorder Free** will record them, even with the sound. [Download](#) it to **capture video from your screen**.

---

## Easy Steps are Here:

### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to **choose the recording region** you need to record:

**Region stable - region from windows:** move the cursor until the area or window is highlighted. (Ctrl + Enter)

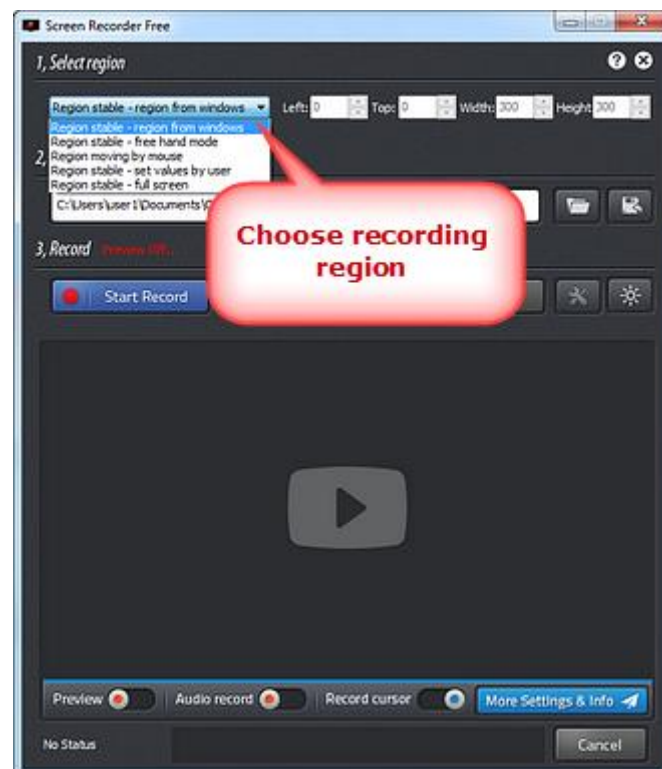

**Region stable - free hand mode:** click and drag the mouse to make a selection on the screen. Release mouse when done. (Ctrl + Left Click)

**Region moving by mouse:** the capture region will follow the cursor wherever it goes during recording

**Region stable - set values by user:** enter dimensions (in pixels) into the Top, Left, Width and Height fields.

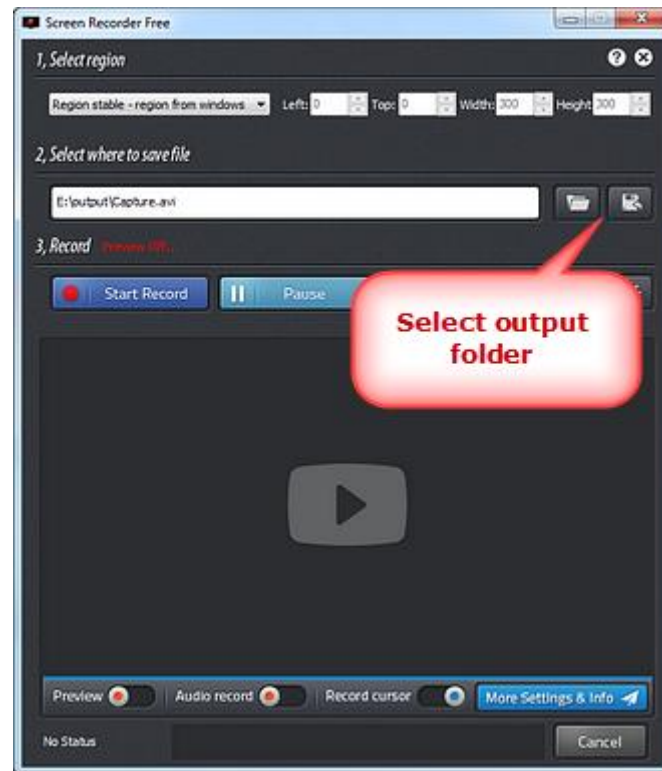

**Region stable - full screen:** record large, maximized applications or all activity on your computer desktop.

In this tutorial choose the "**Region stable - region from windows**".

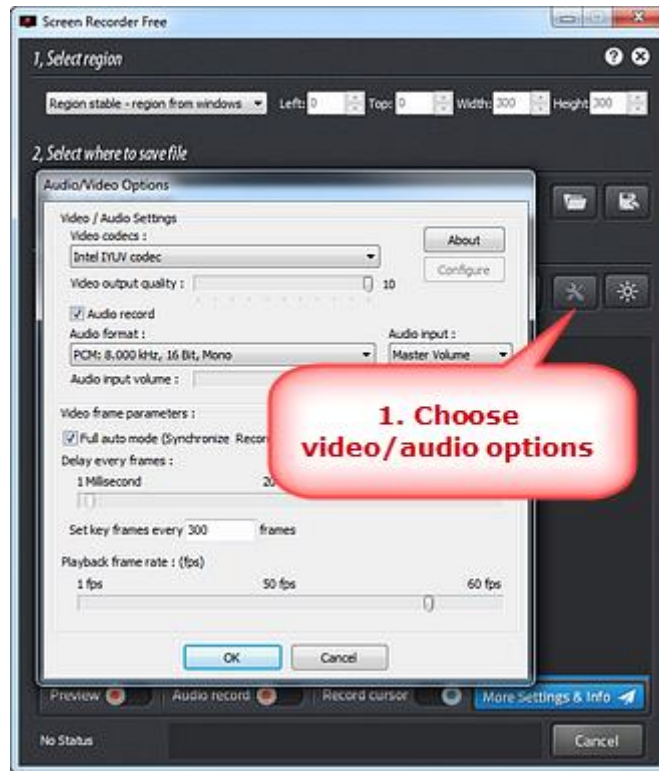

### Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

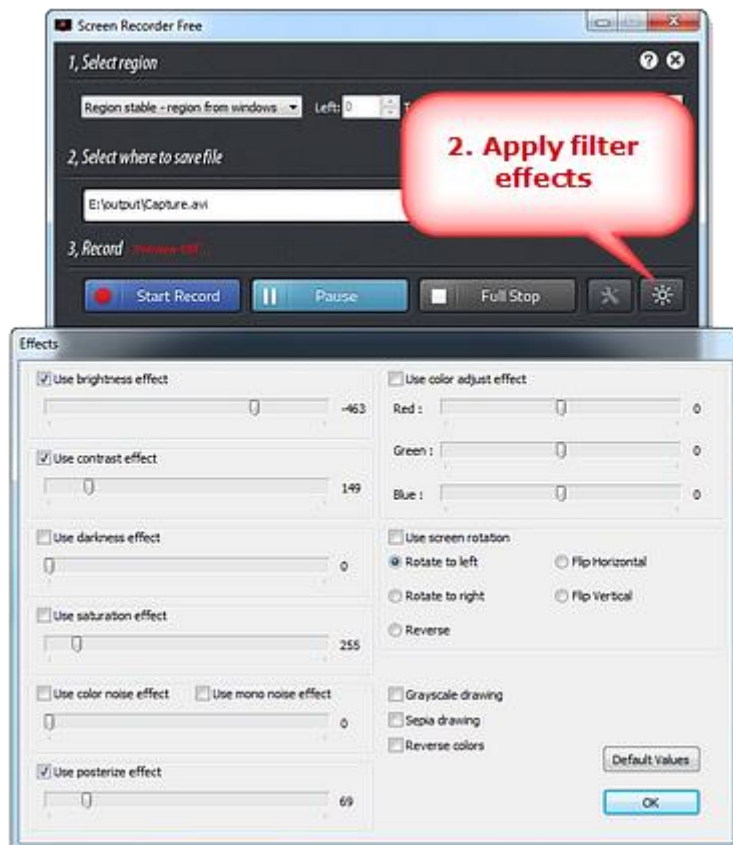

### Step 3. Specify the Recording Settings

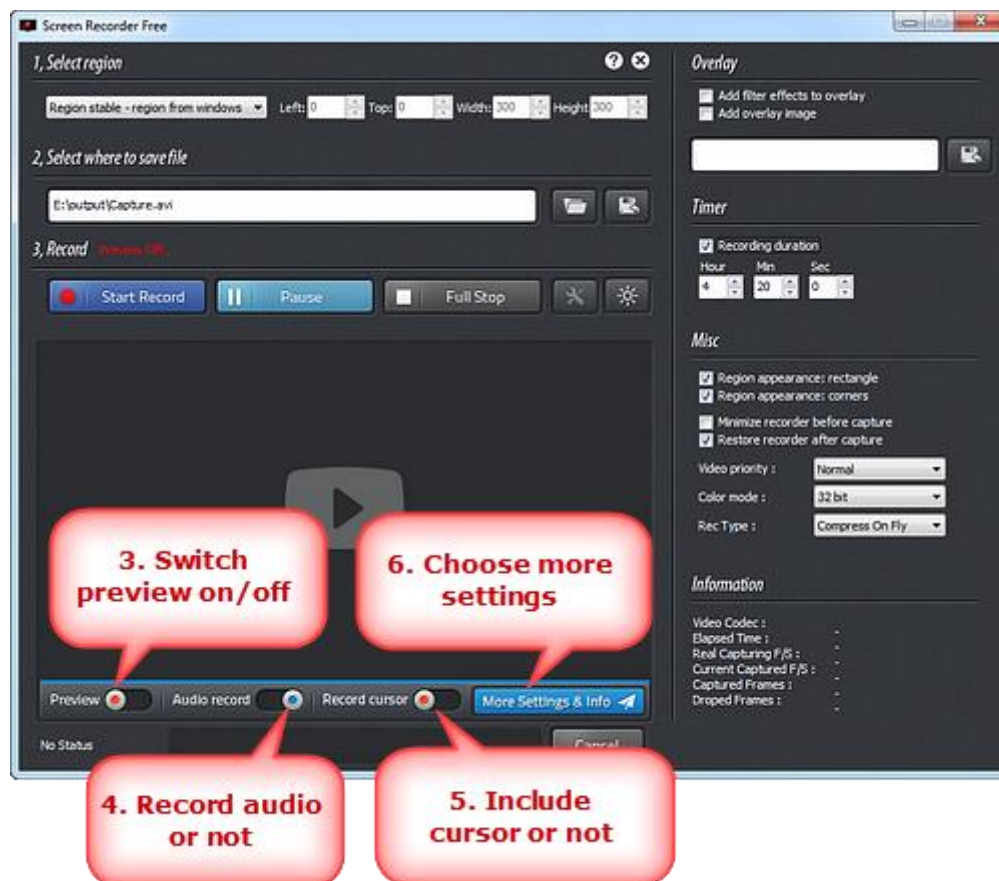

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

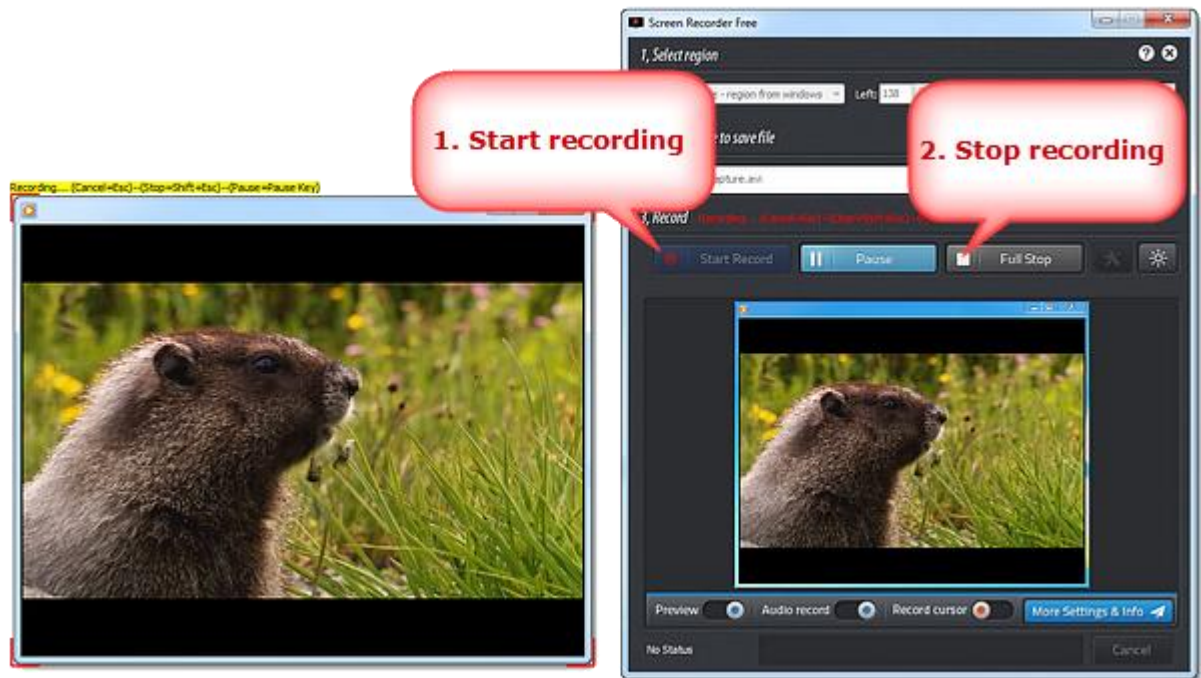

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click **"Ctrl + Enter"** to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Capture Webcam?

**Screen Recorder Free** offers the capability to **record video from your webcam** for video streaming, surveillance and more. Its user-friendly interface makes **webcam recording** quick without any complex settings. [Download](#) it to **capture your webcam**.

---

### Easy Steps are Here:

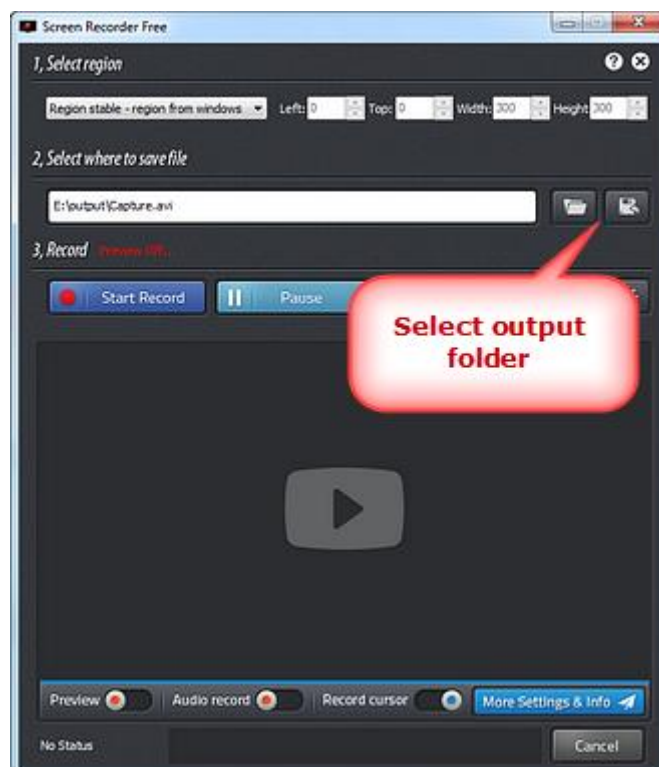

#### Step 1. Select Recording Region

Click the **"Select region"** drop-down menu to choose **"Region stable - region from windows"** as the recording region.

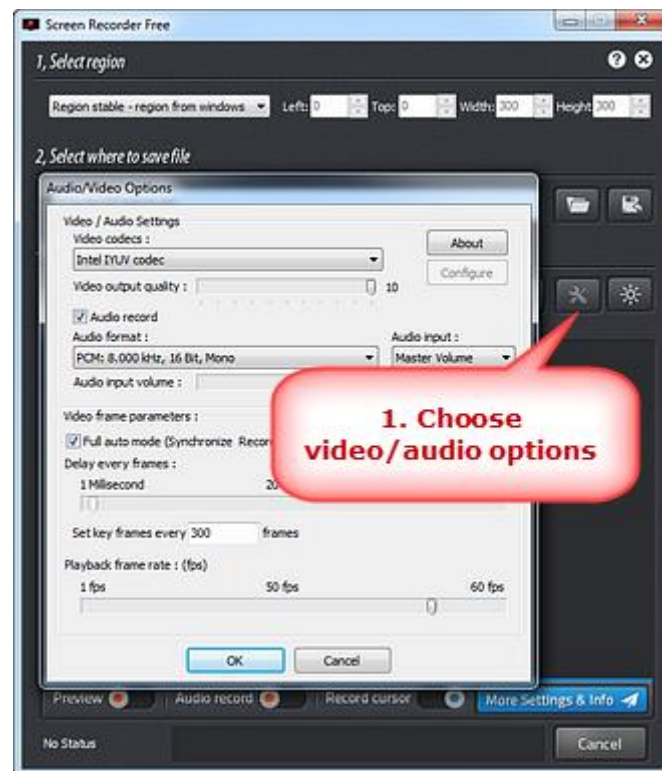

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

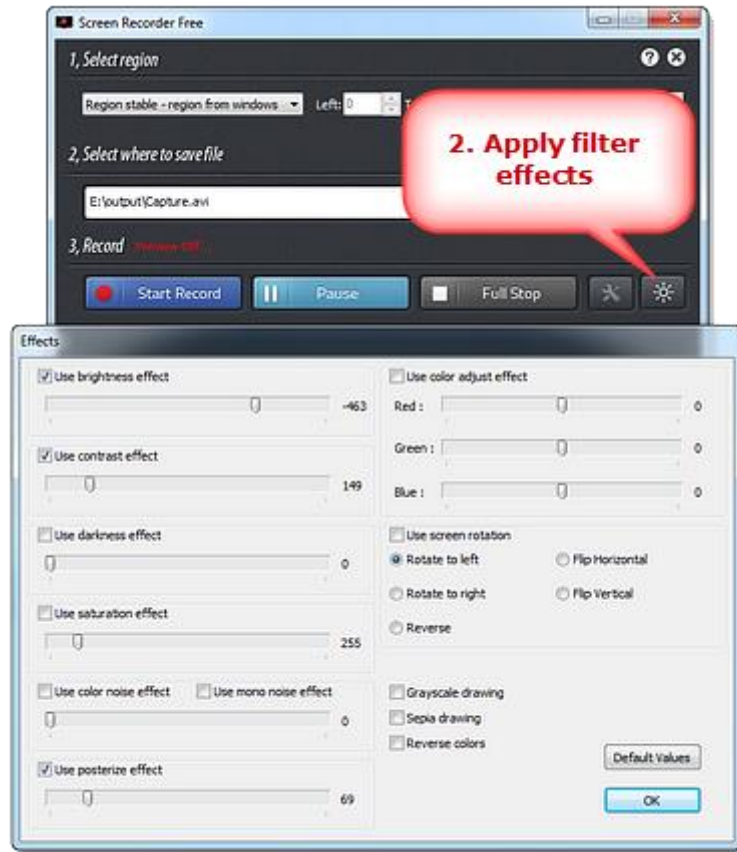

### Step 3. Specify the Recording Settings

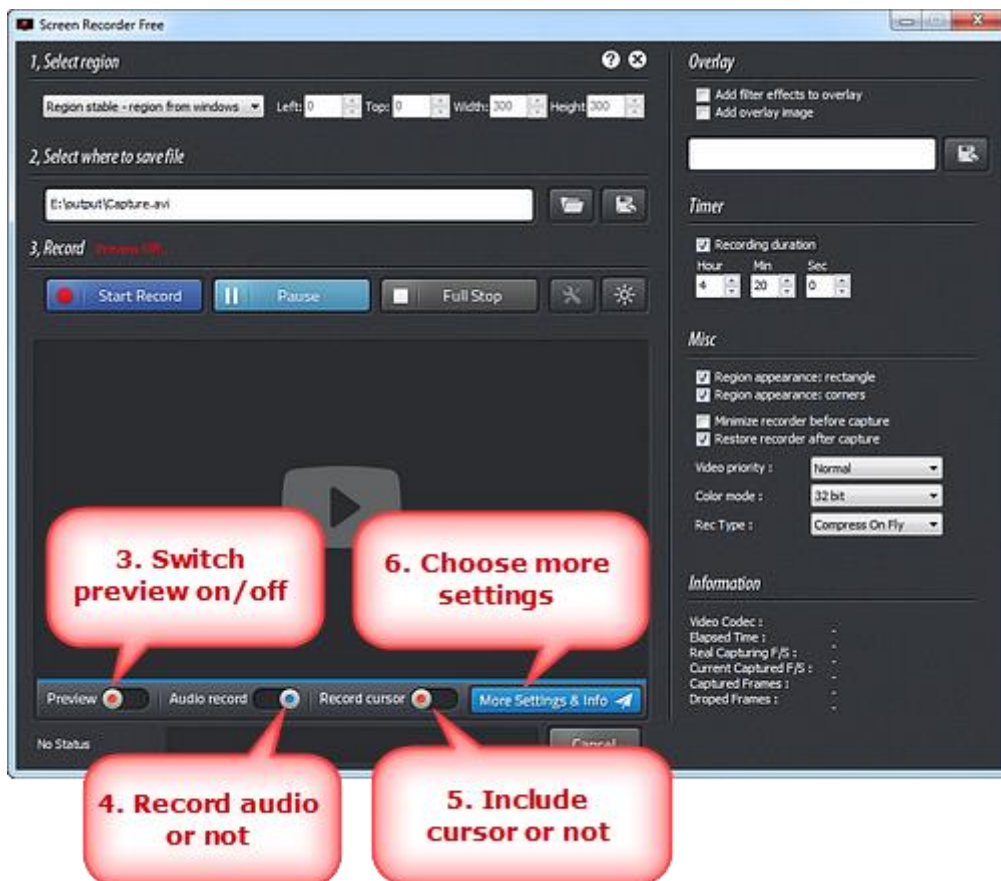

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, initiate a webcam chat you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click **"Ctrl + Enter"** to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Capture Skype Video Calls?

If the topic of a **Skype video conversation** is important, such as a conversation with your boss, you'll want to save the video for future reference. **Screen Recorder Free** provides an easy way to record online video conversations, interviews, conferences, tutorials, podcasts, or family video chats. [Download](#) it to **capture Skype video calls**.

---

### Easy Steps are Here:

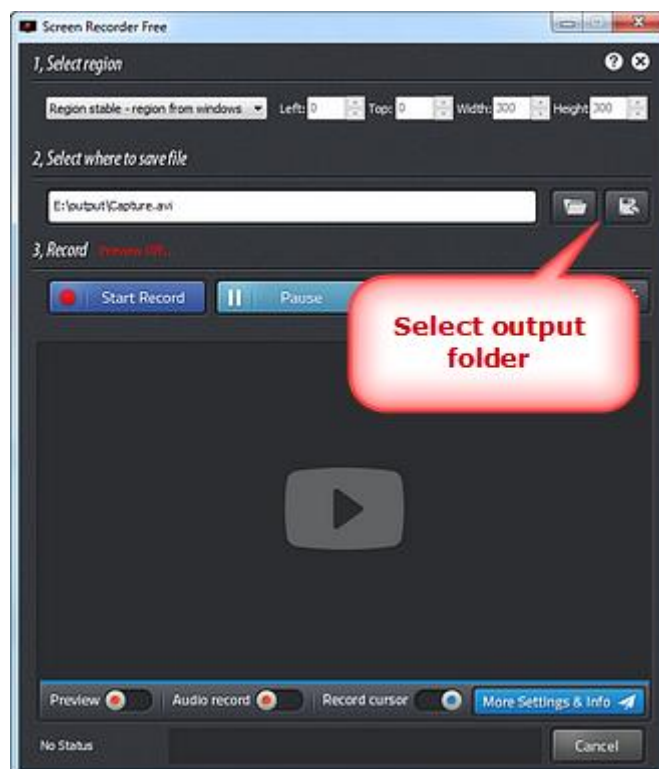

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to choose "**Region stable - region from windows**" as the recording region.

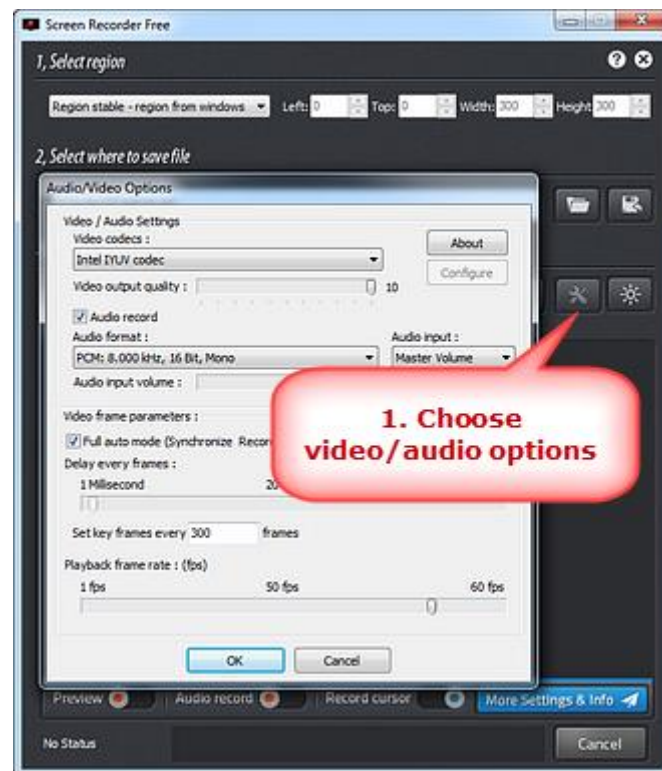

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

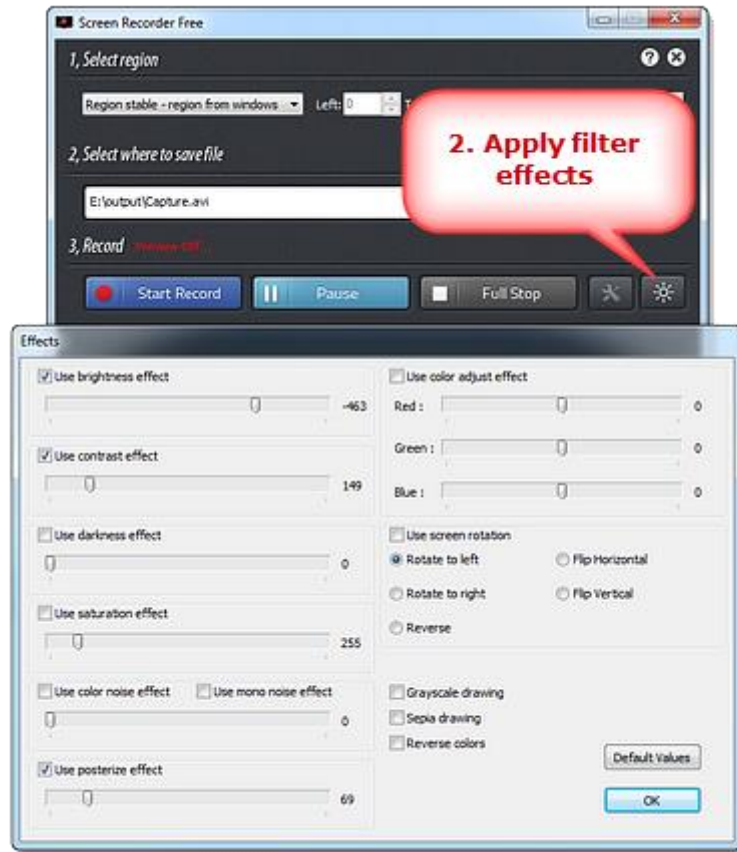

### Step 3. Specify the Recording Settings

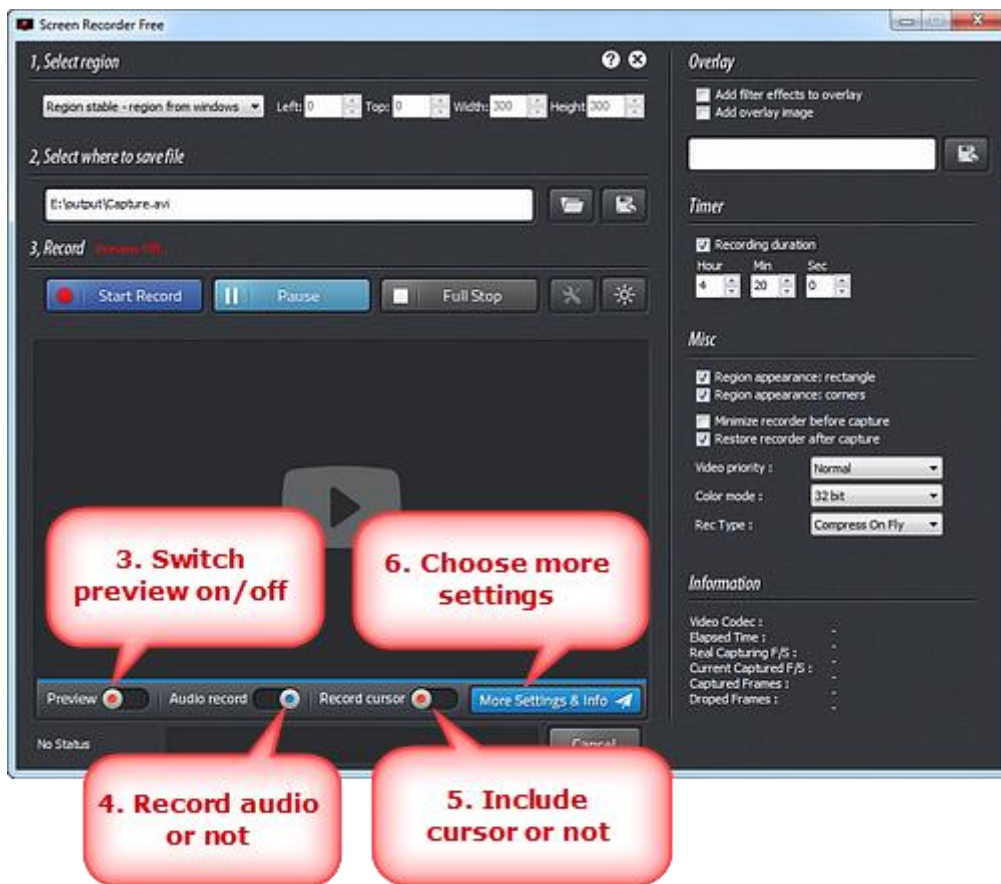

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, initiate Skype video that you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click **"Ctrl + Enter"** to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Record Video from Window?

**Screen Recorder Free** is a compact, yet full-featured **screen video recorder** tool that allows you to easily **record screen activities** and capture anything on the screen including windows, objects, menus, full screen, and so on. It provides many region selections, including "**region from windows**". Once you select this option, the window will be highlighted when you move the cursor. [Download](#) it to **record video from window**.

---

### Easy Steps are Here:

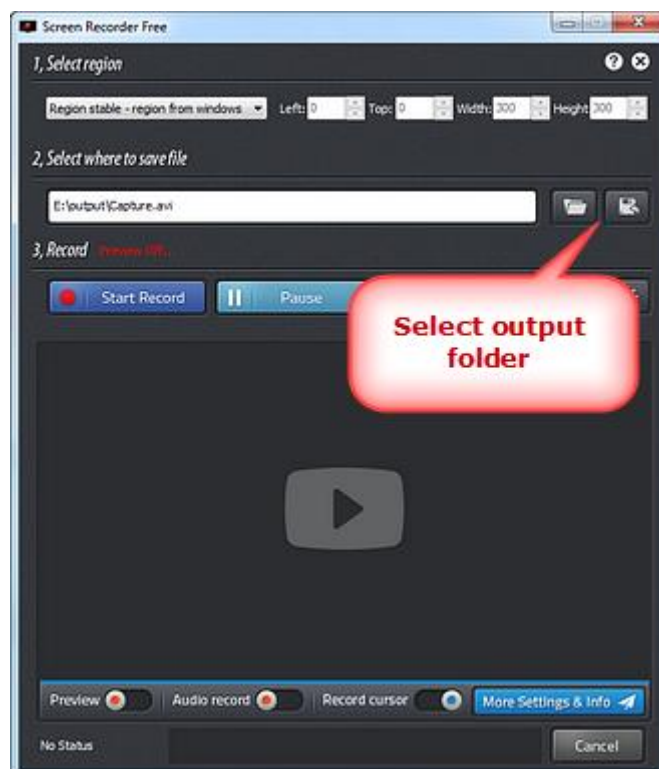

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to check the "**Region stable - region from windows**"

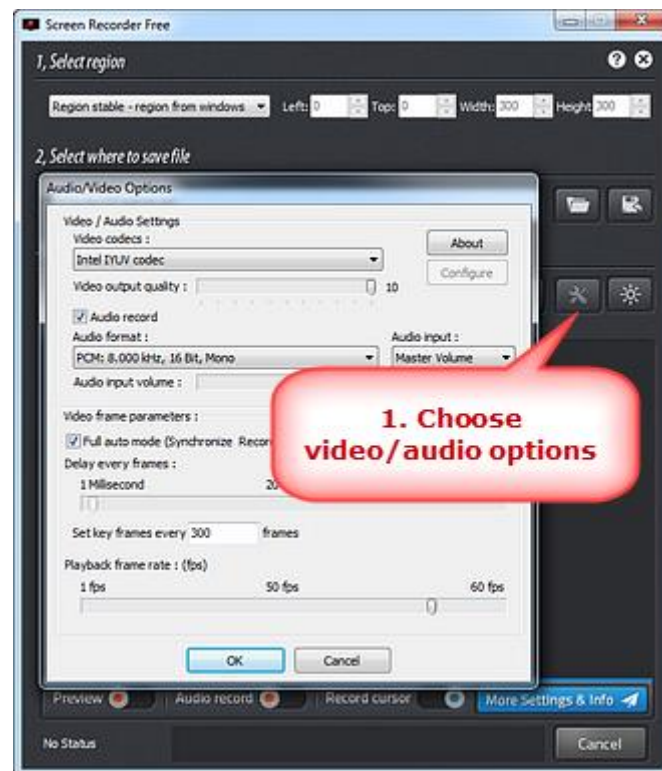

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

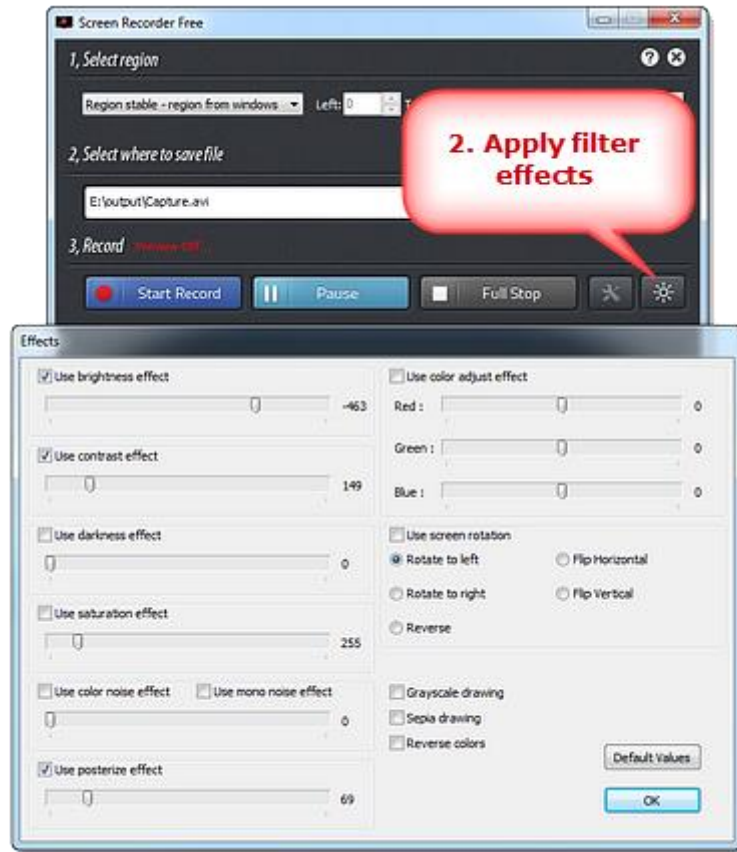

### Step 3. Specify the Recording Settings

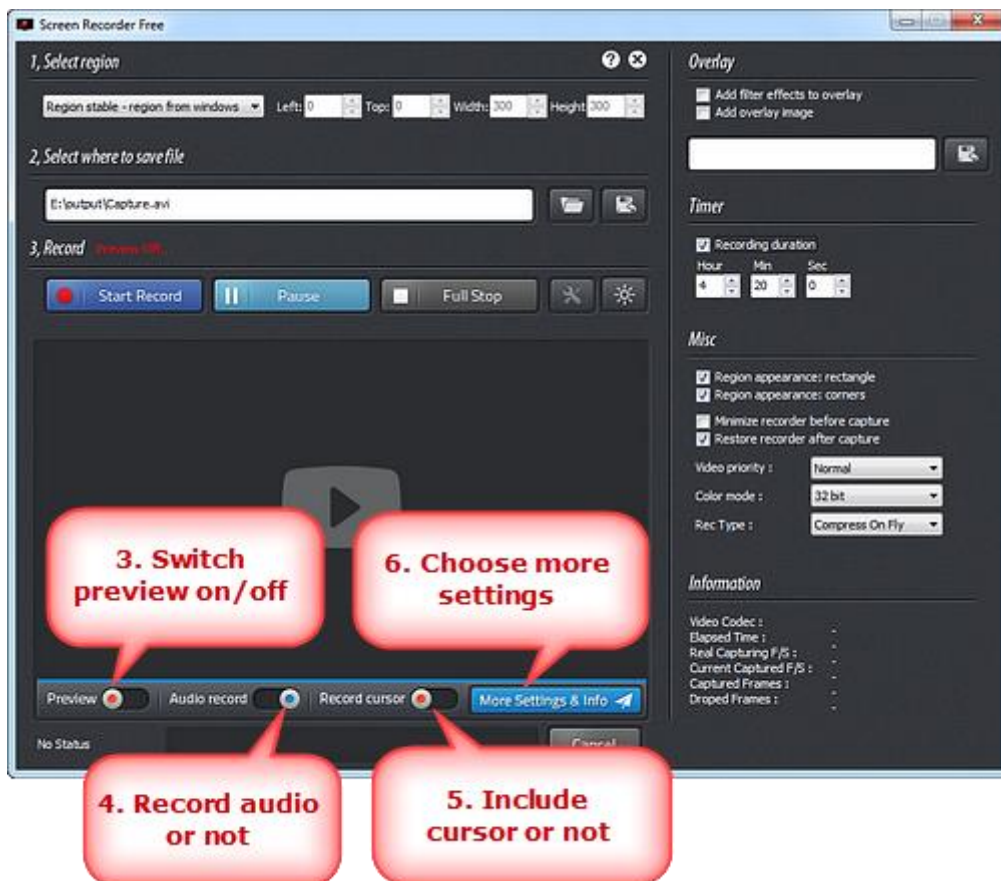

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

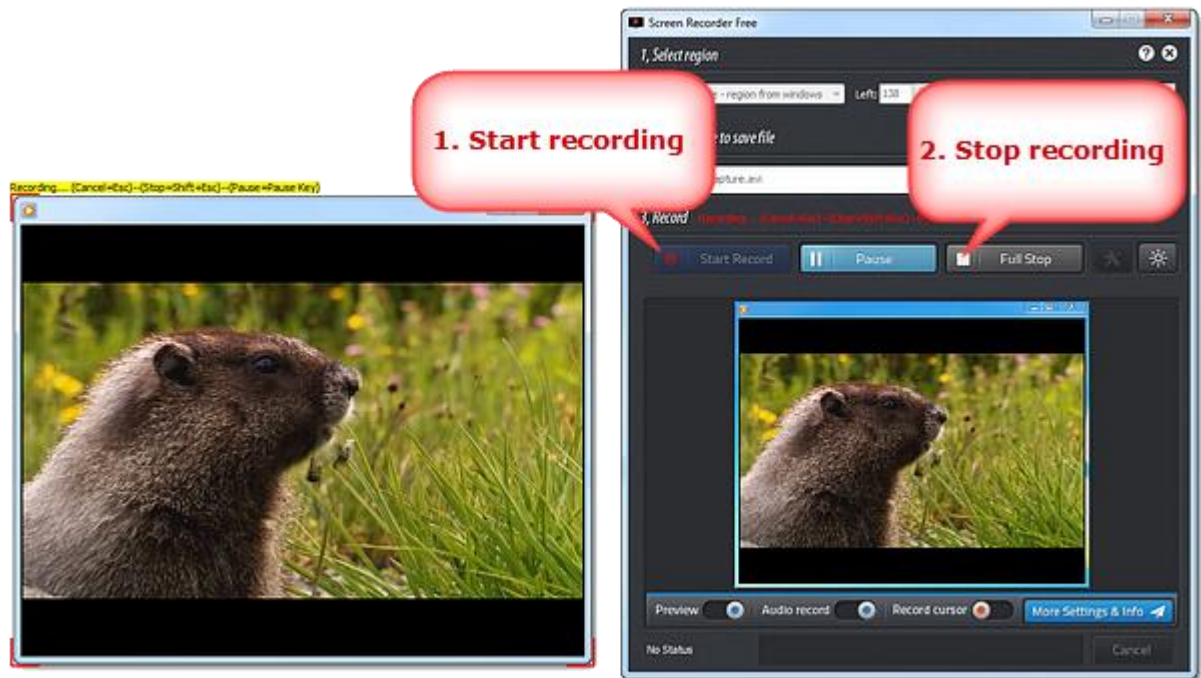

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click **"Ctrl + Enter"** to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Record Video in Free Hand Mode?

**Screen Recorder Free** gives you the power to **select the recording region** in free hand mode, which means that when you trace with the mouse while holding down the left button near one region, and release the left button, then the recording region is formed. No complex region dimension settings. [Download](#) it to **record video in free hand mode**.

---

### Easy Steps are Here:

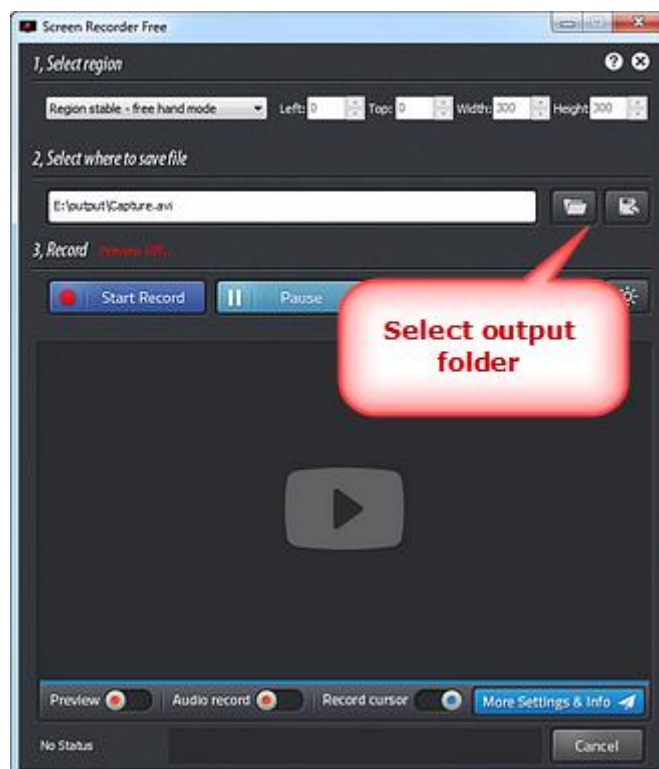

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to check the "**Region stable - free hand mode**".

## Step 2. Choose File Folder

Click **"Open Folder"** or **"Select..."** button to **choose a folder** to save the recording video.

### Step 3. Specify the Recording Settings

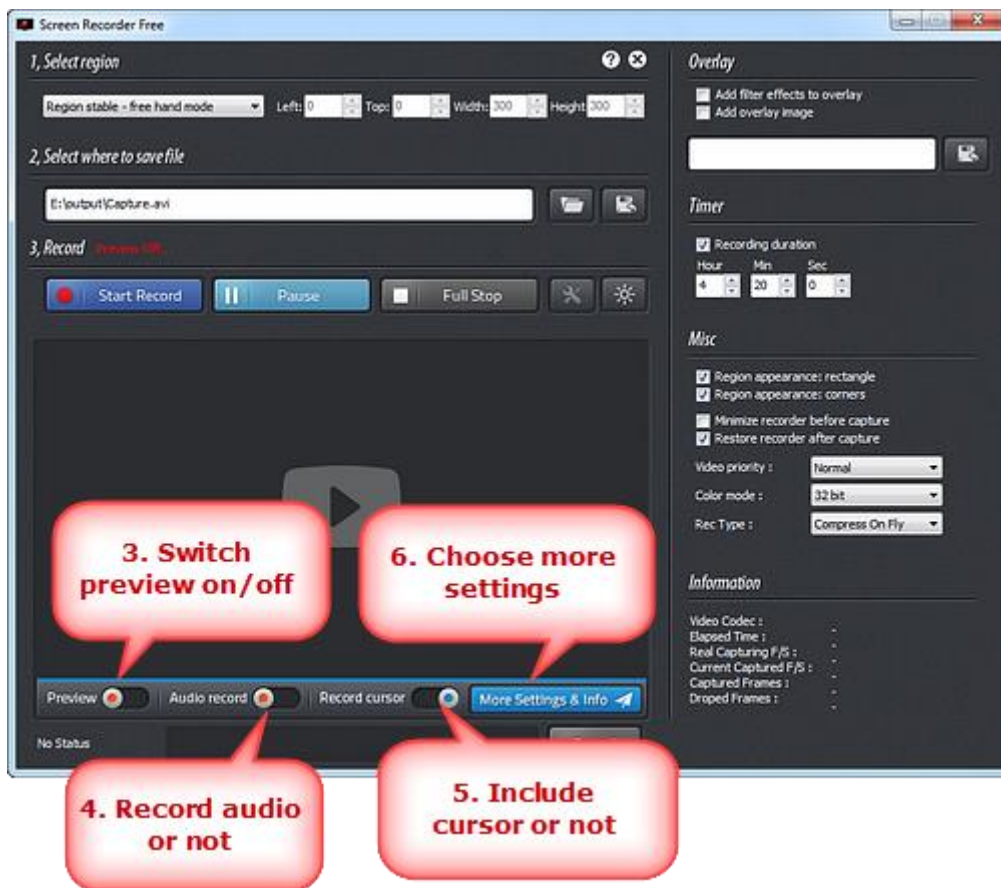

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

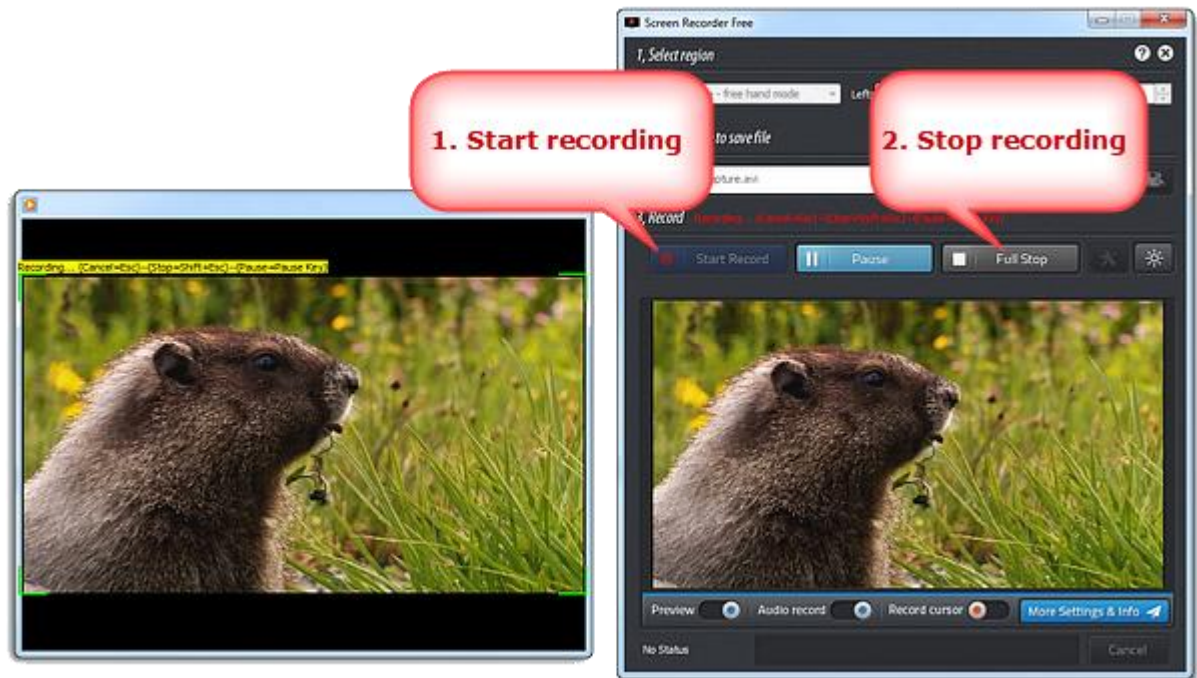

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Click and drag the mouse to make the selection you need on the screen. Release mouse when done. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Capture Video with Mouse Cursor Displayed?

**Screen Recorder Free** is a specialist program for those who need to record applications on their PC for training or promotion purposes. If needed, you can **record and playback a series of mouse movements**, including right clicks, drag-and-drop actions, etc.

[Download](#) it to **record video with mouse cursor displayed**.

---

### Easy Steps are Here:

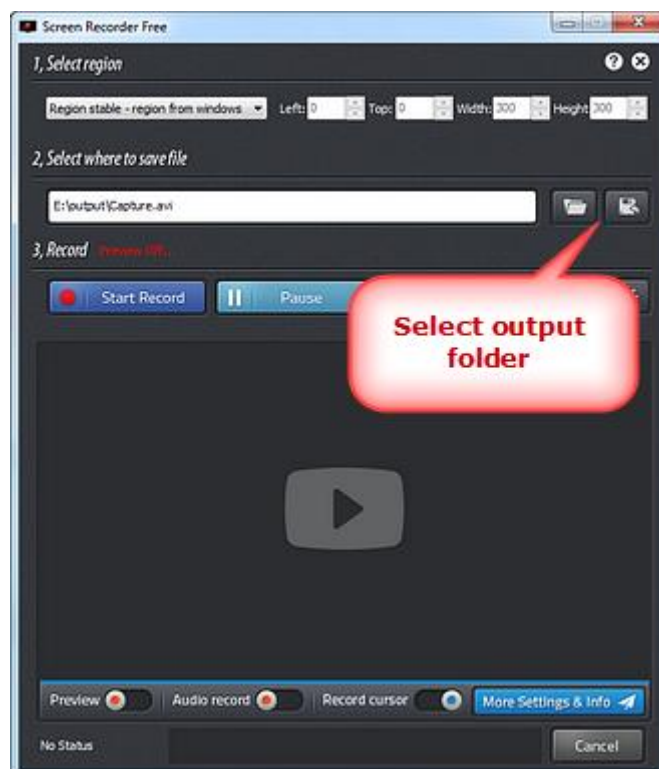

#### Step 1. Select Recording Region

Click the **"Select region"** drop-down menu to **choose the recording region** you need to record.

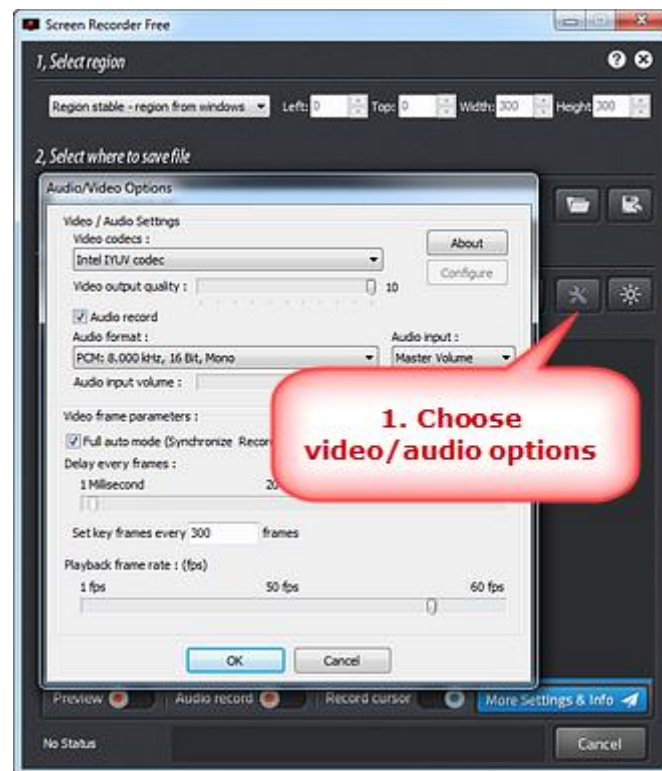

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

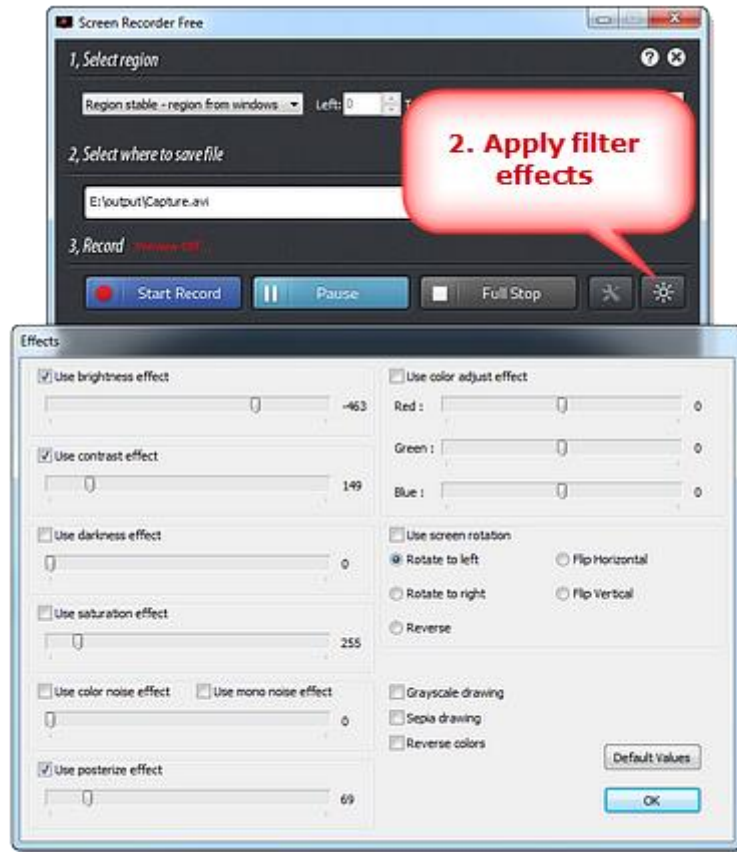

### Step 3. Specify the Recording Settings

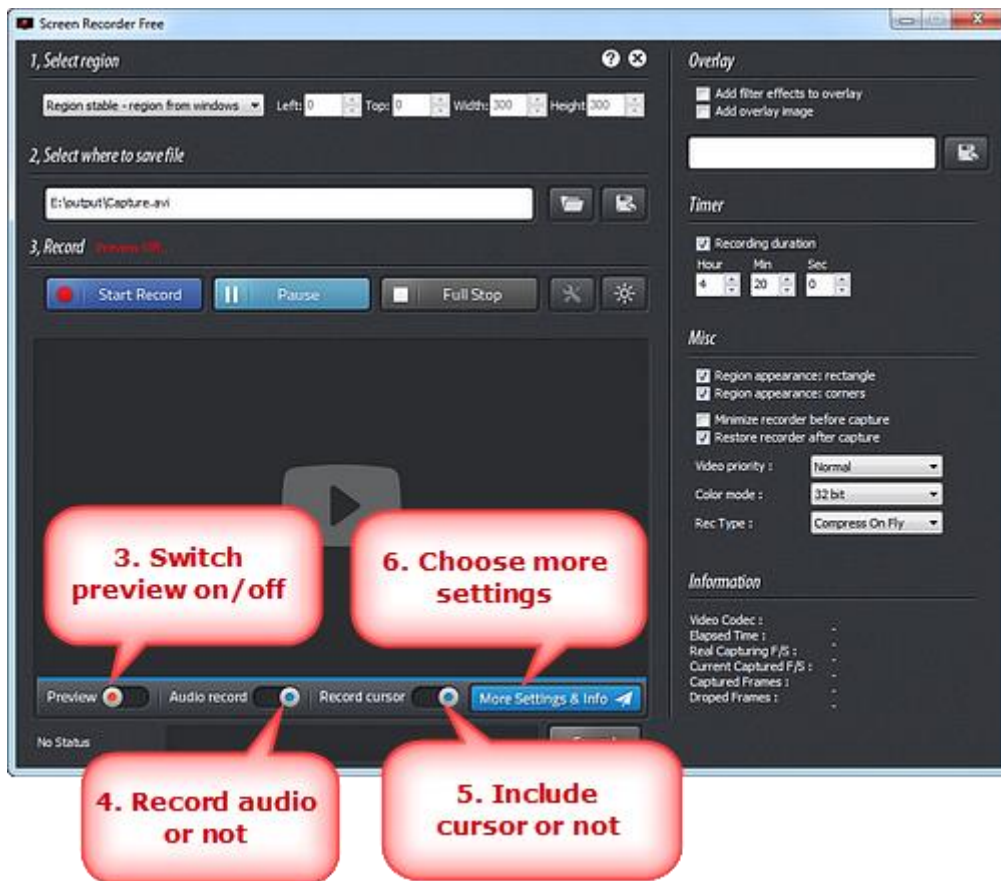

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

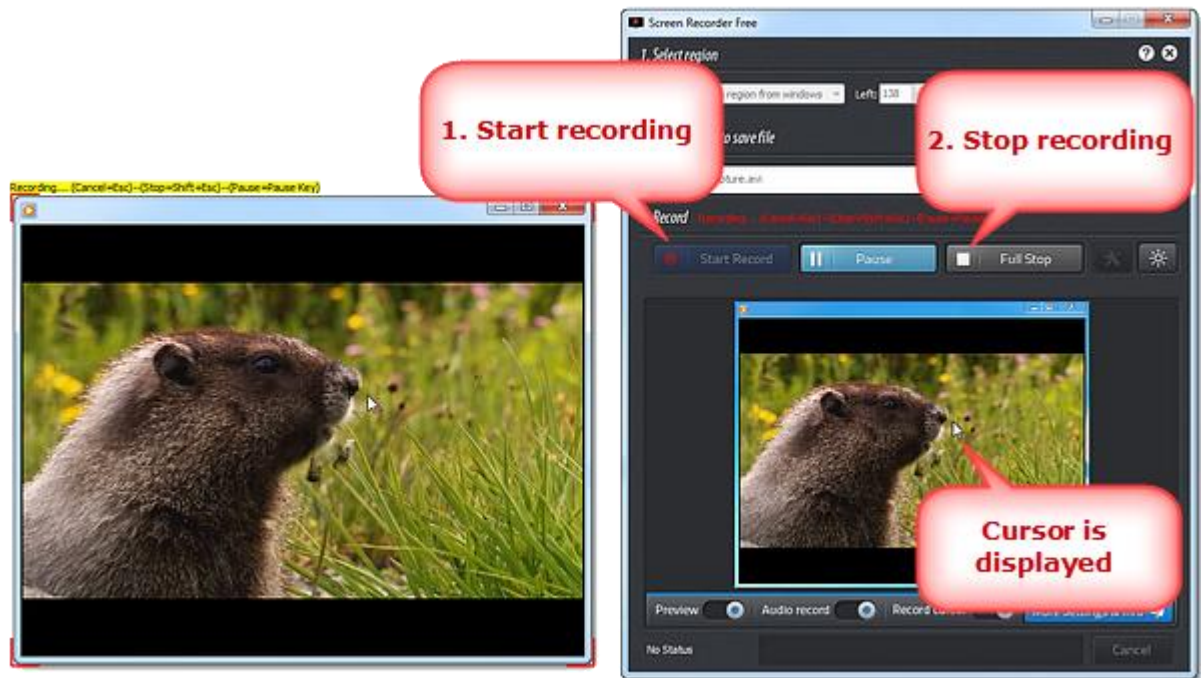

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click **"Ctrl + Enter"** to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Record a Specific Area on Your Screen?

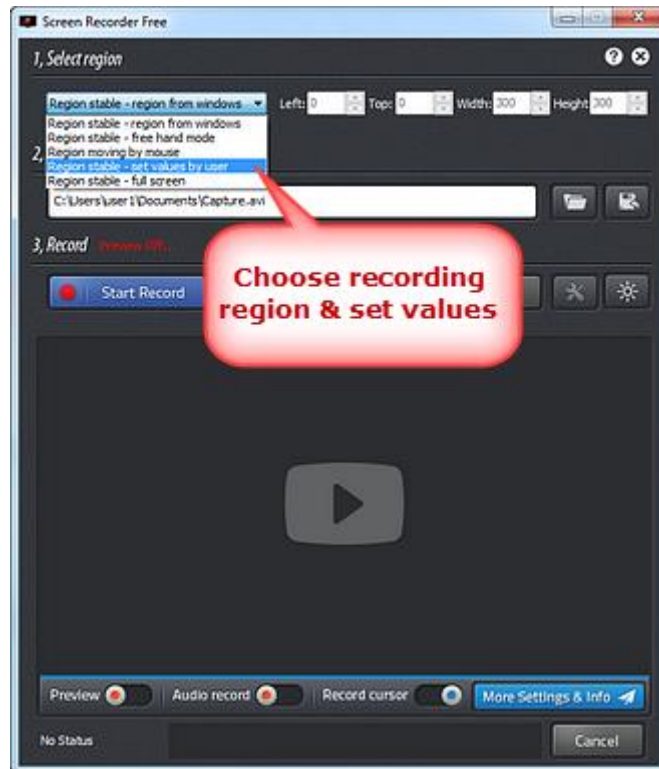

**Screen Recorder Free** is a **screen recorder** that allows you to record your entire screen, single applications, or part of your display - anything you can see on your screen. The recording region can be easily customized by entering specific values. [Download](#) it to **record a specific area on your screen**.

---

### Easy Steps are Here:

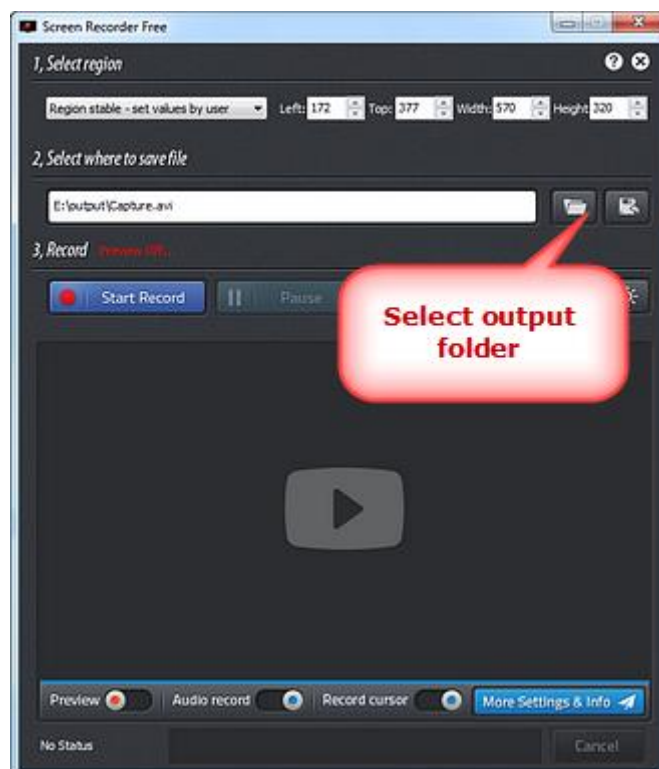

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to choose the "**Region stable - set values by user**" and enter the dimensions into the Top, Left, Width and Height fields to specify the recording region.

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

### Step 3. Specify the Recording Settings

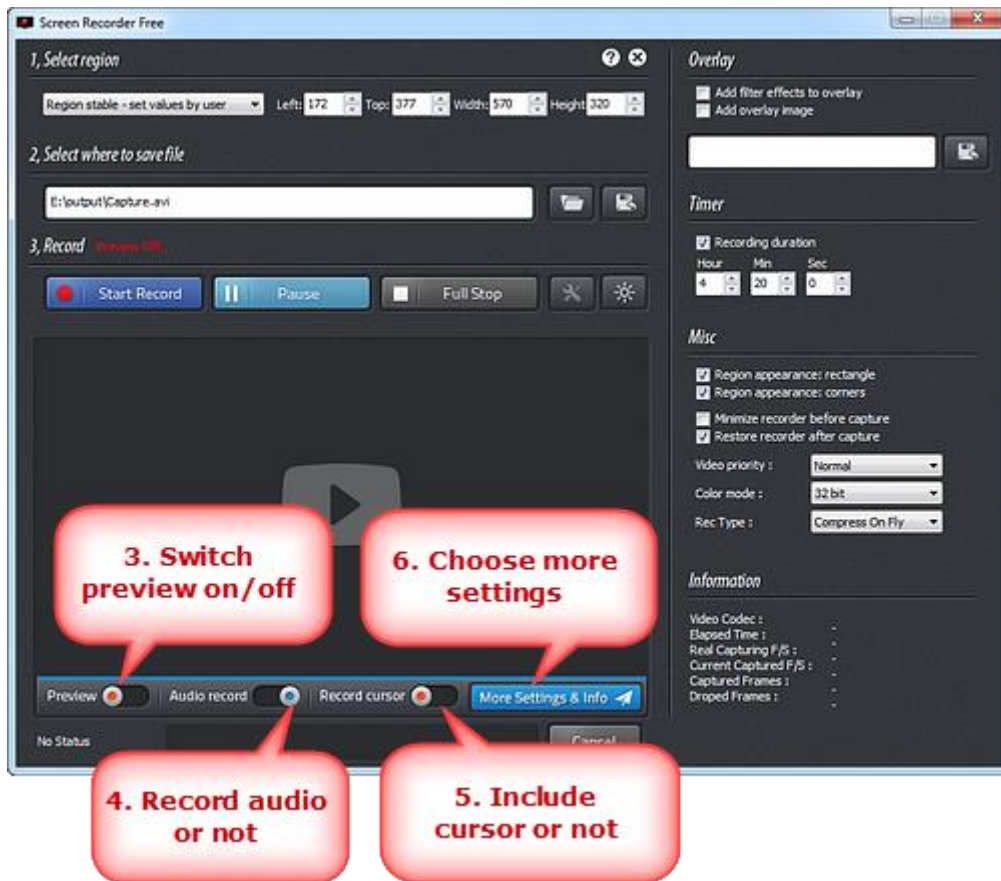

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

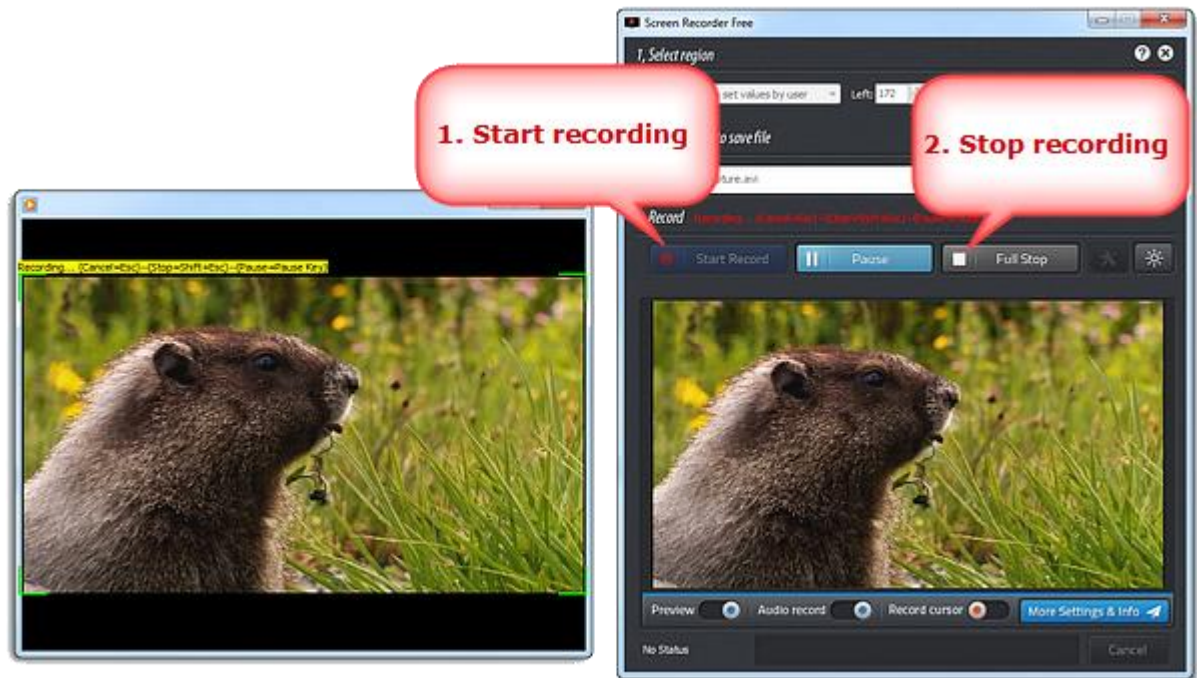

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

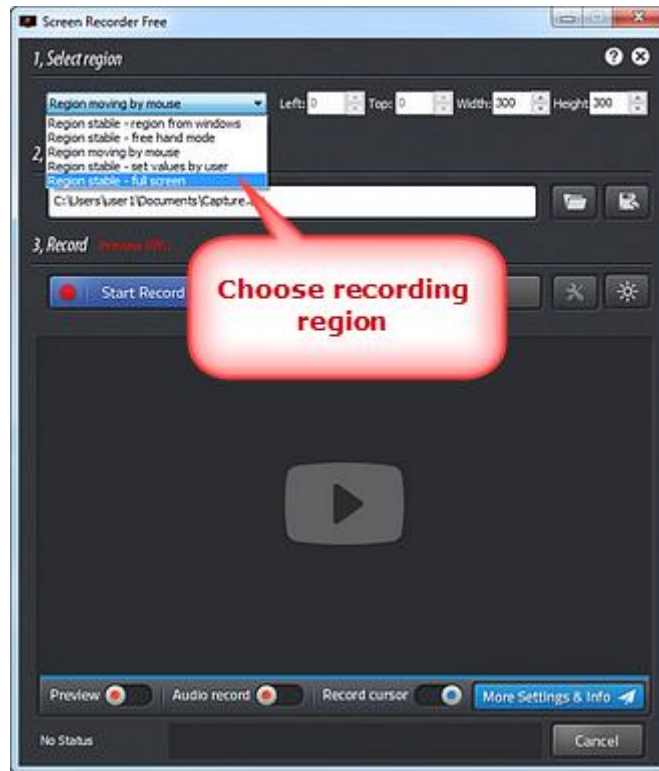

## How to Record Full Screen?

In some cases, the best way to illustrate something happening on your screen is to show someone. **Screen Recorder Free** will help you simply **record anything from your screen** in full screen mode. [Download](#) it to **record full screen**.

### Easy Steps are Here:

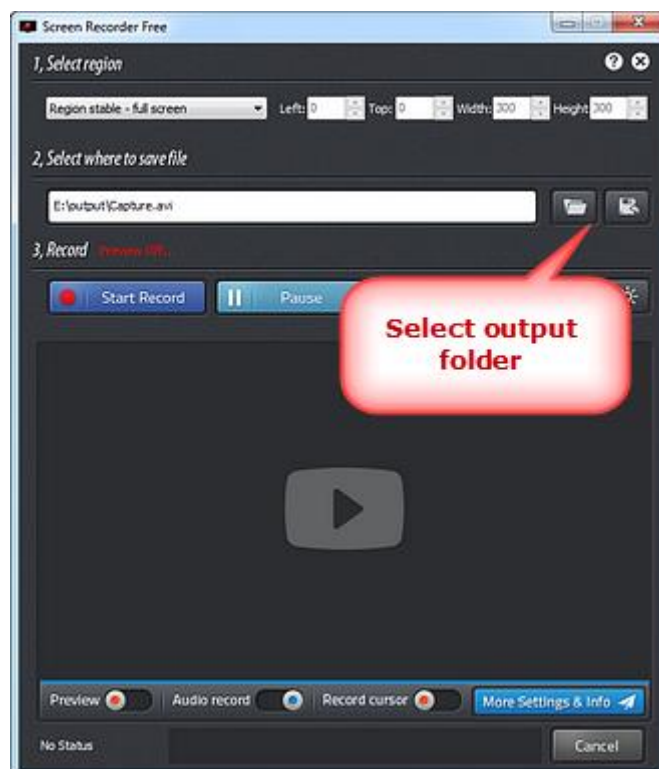

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to check the "**Region stable - full screen**" as the recording region.

## Step 2. Choose File Folder

Click **"Open Folder"** or **"Select..."** button to **choose a folder** to save the recording video.

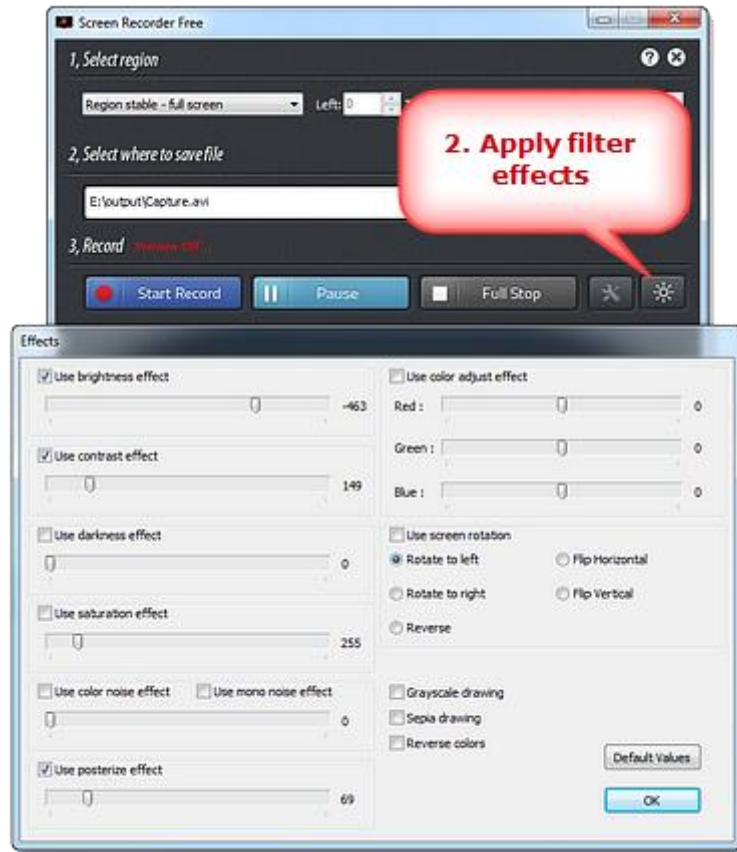

### Step 3. Specify the Recording Settings

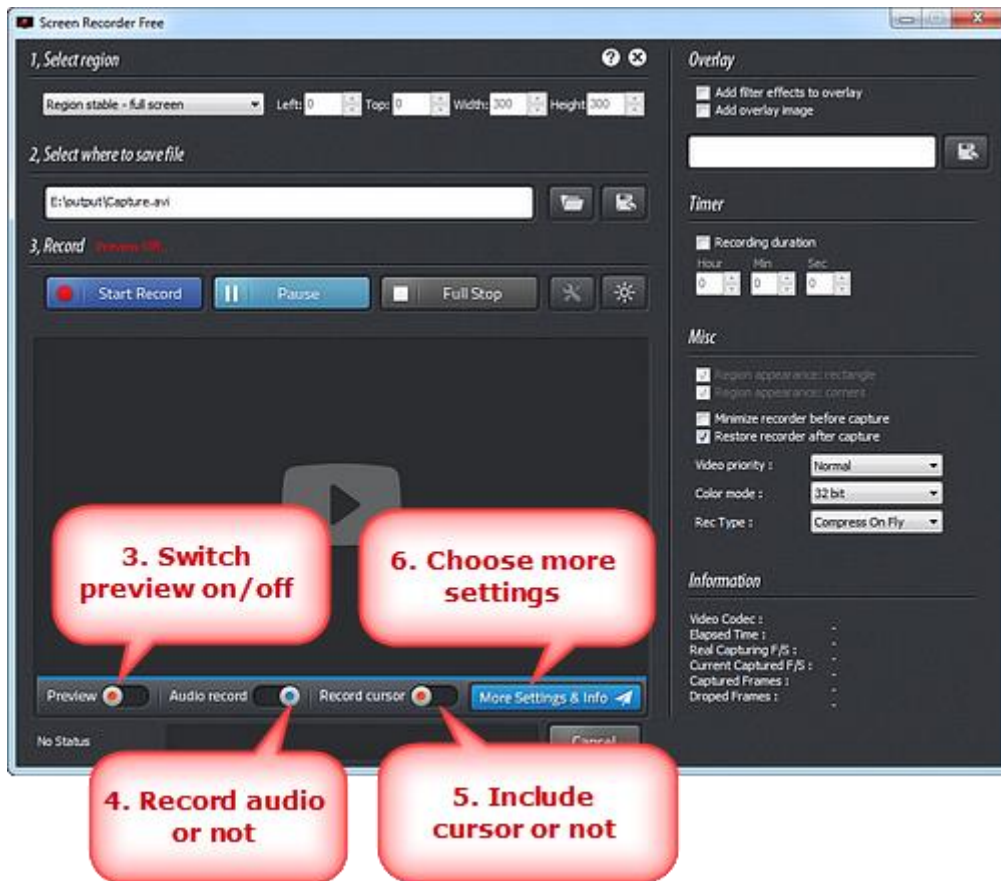

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

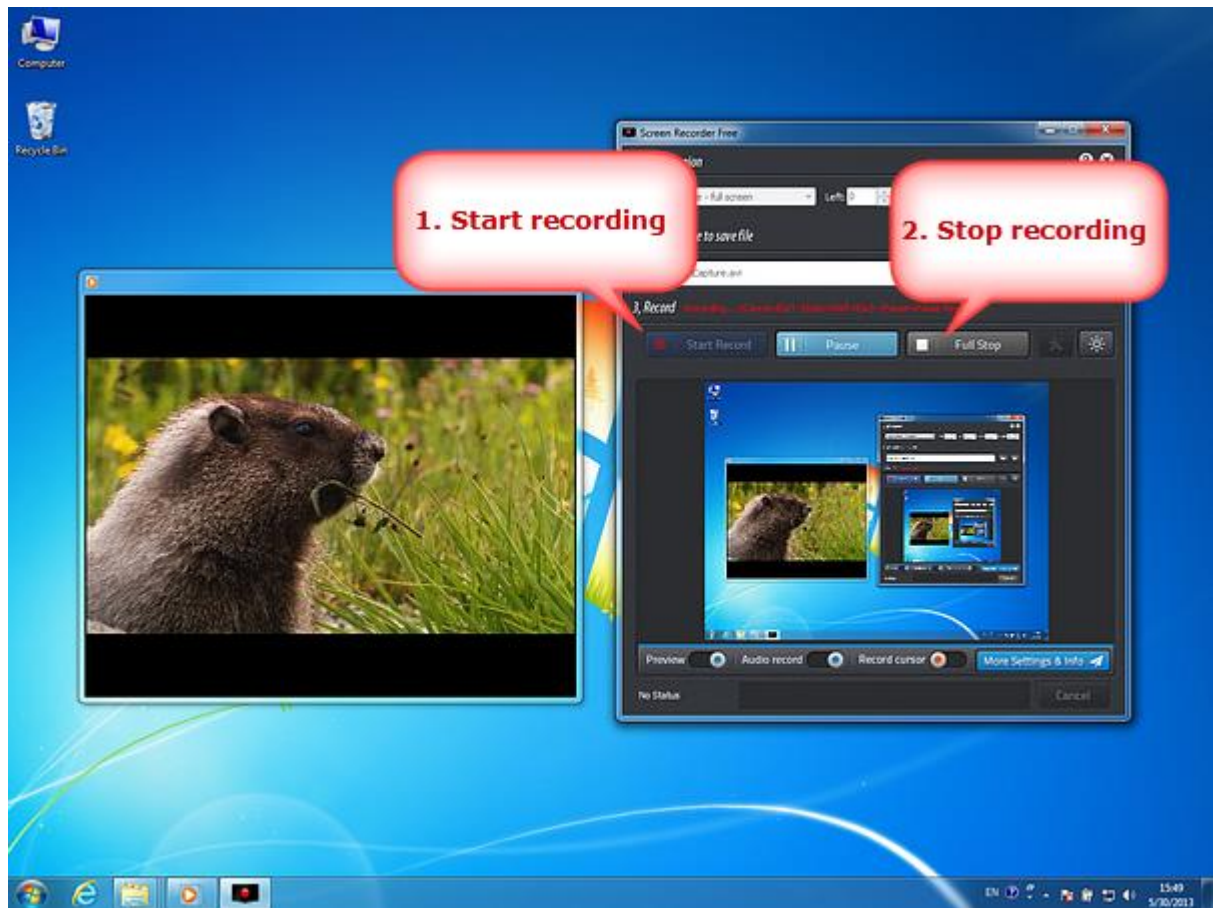

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Add Filter Effects?

**Screen Recorder Free** provides tons of different **filter effects** so that you can apply them to videos being recorded. You can even combine effects to create something truly special. [Download](#) it to **add filter effects** to video recording.

---

### Easy Steps are Here:

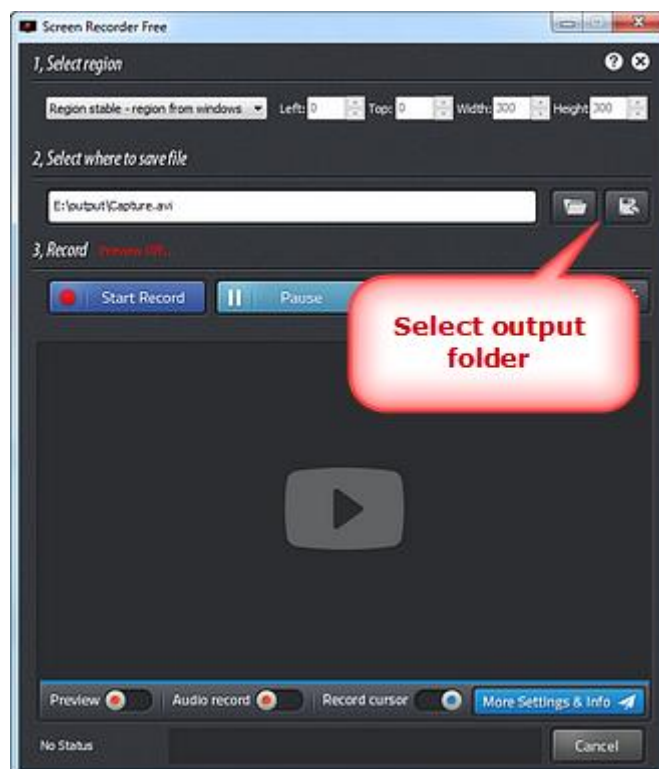

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to **choose the recording region** you need to record.

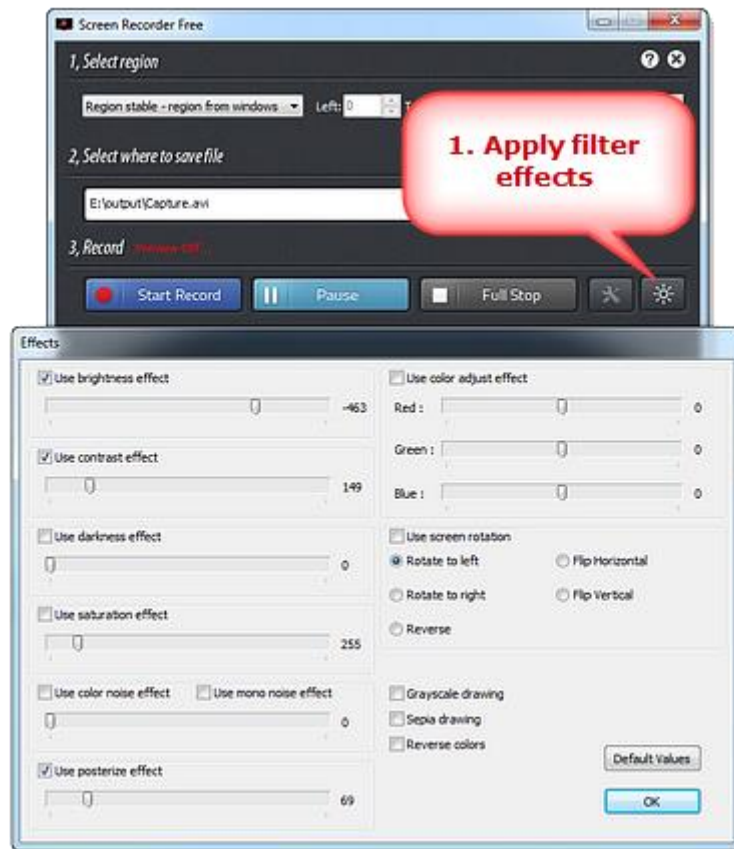

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

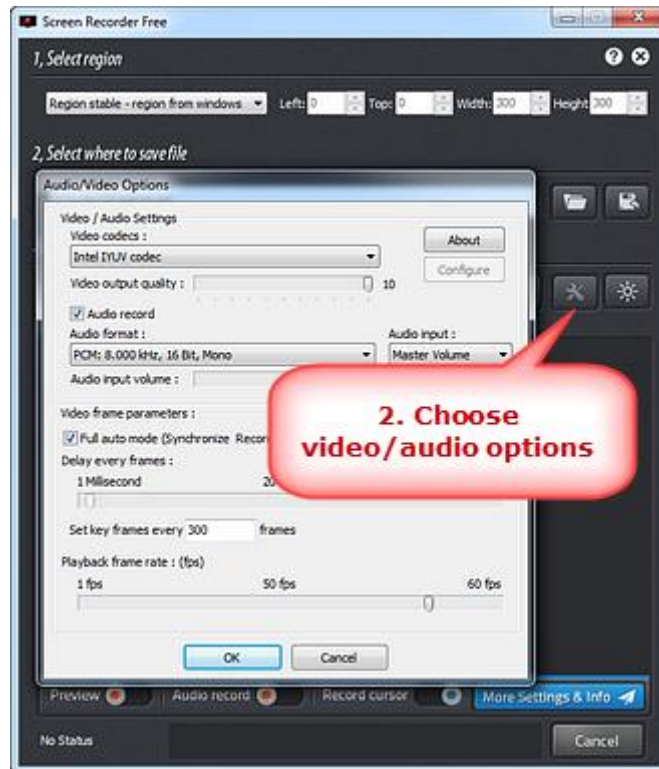

### Step 3. Specify the Recording Settings

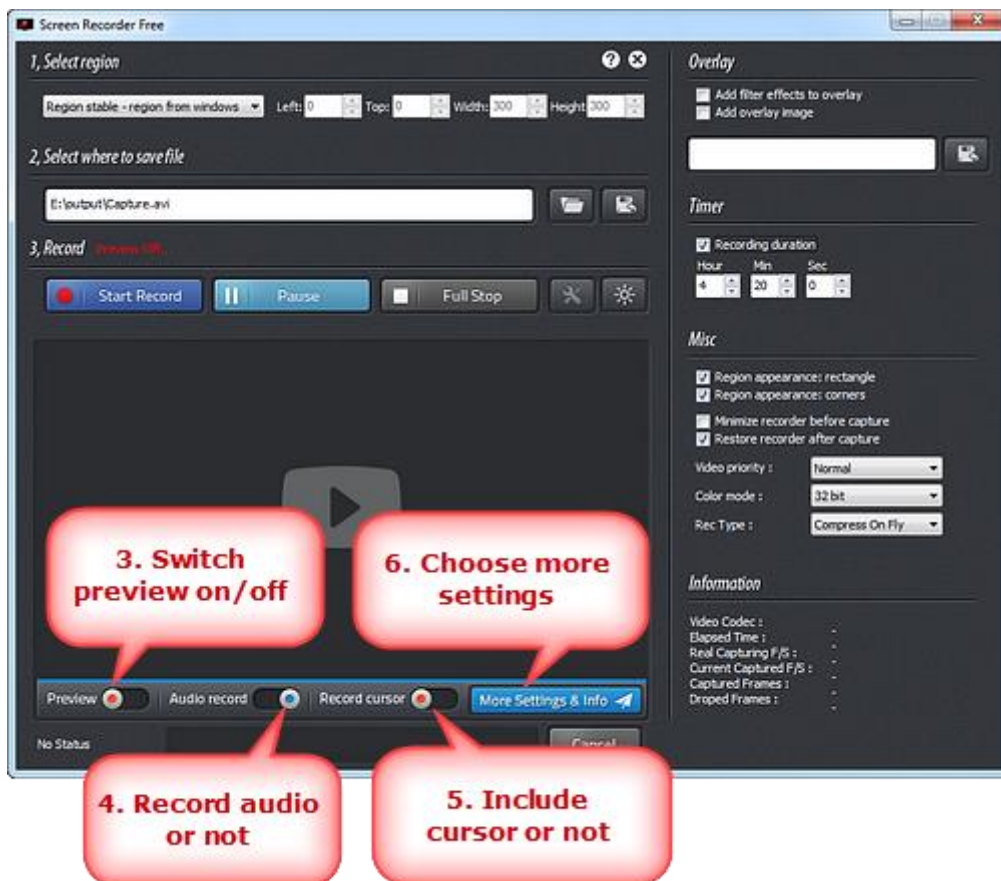

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

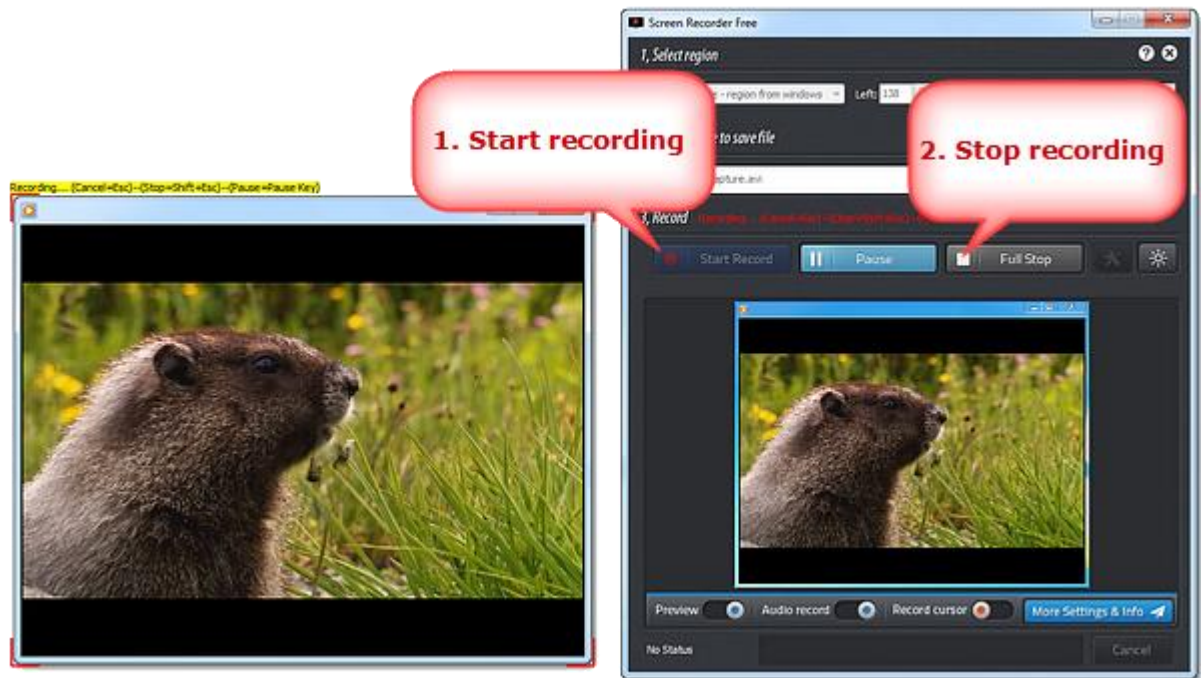

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click **"Ctrl + Enter"** to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Add Overlay Image?

It is often desirable to identify a video as being associated to a person, company, or campaign. One way to do this is to apply a watermark or overlay image to a video. Screen Recorder Free enables you to record video from your screen and add an overlay image to the recorded video. [Download](#) it to **add overlay image** to the video recording.

---

### Easy Steps are Here:

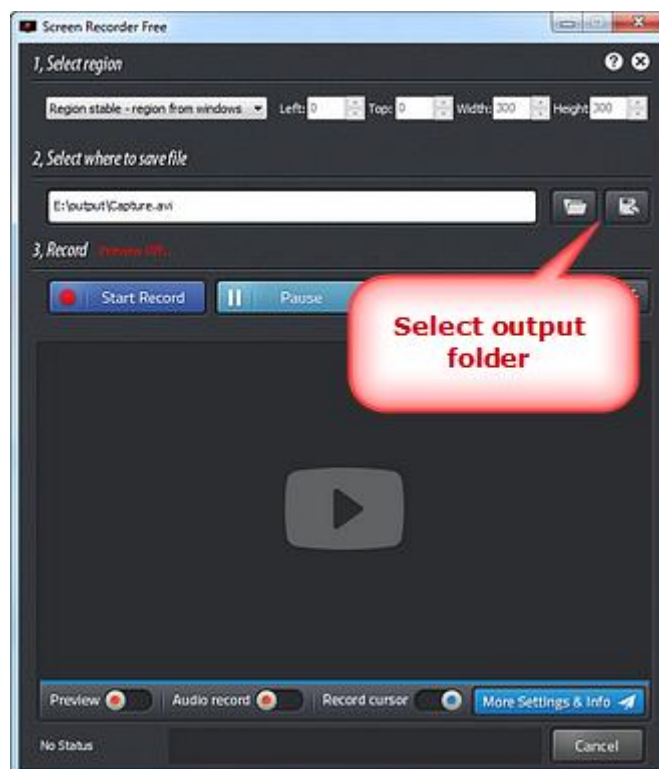

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to choose the recording region you need to record.

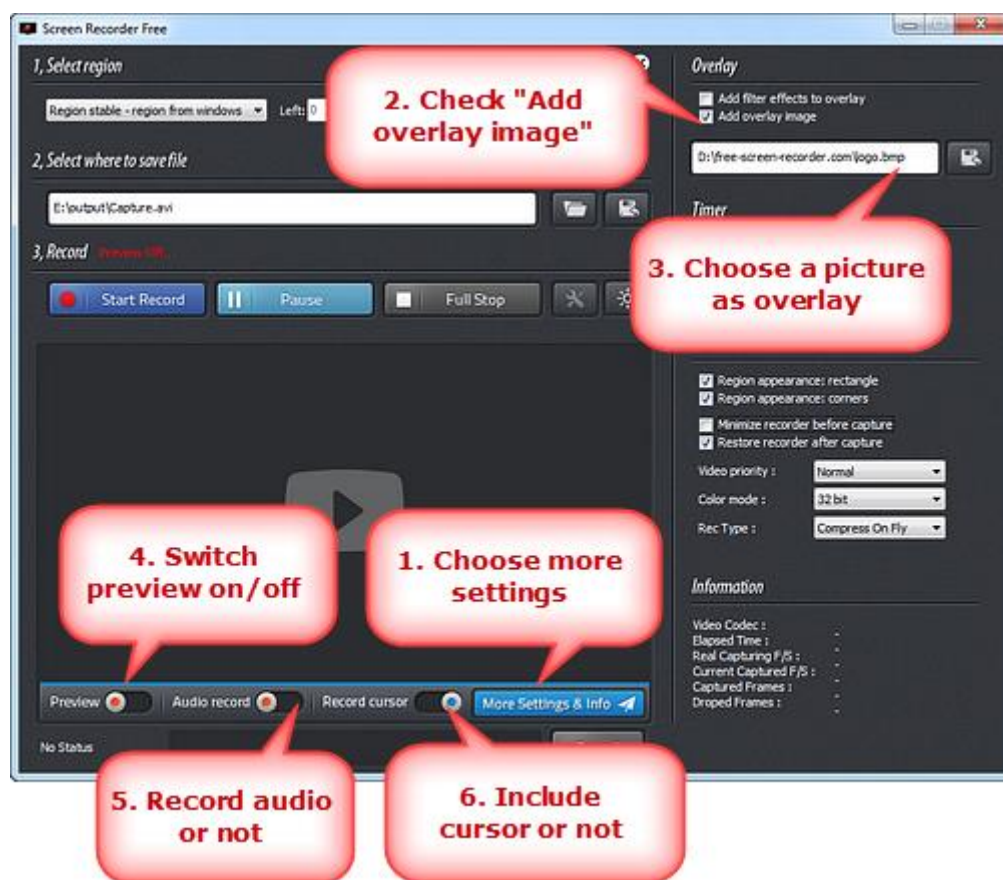

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

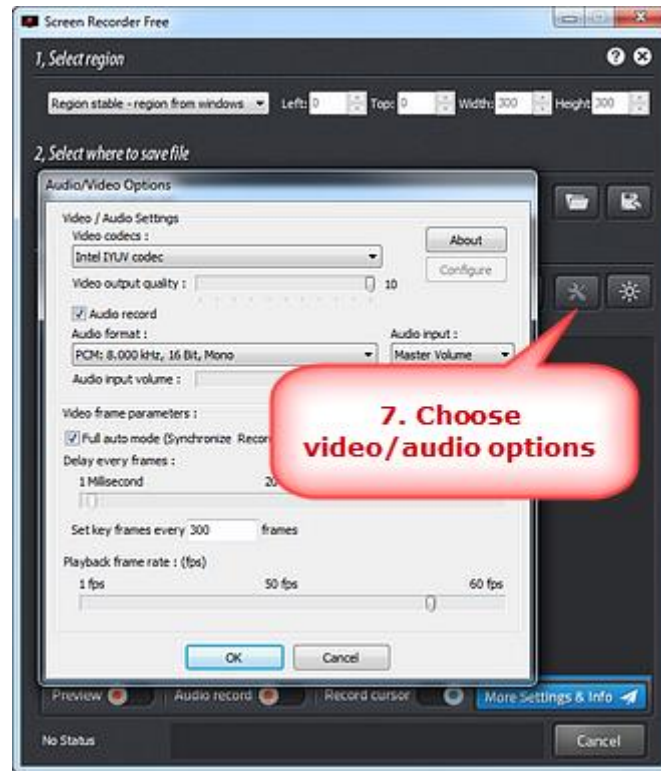

### Step 3. Specify the Recording Settings

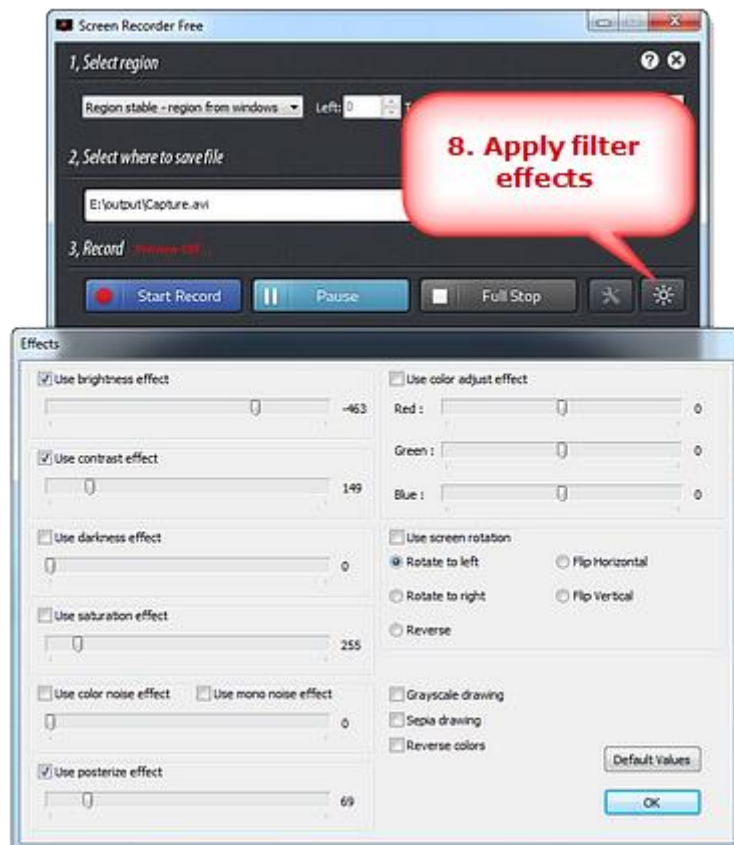

To **add an overlay**, superimposing a picture to the recording, click "**More Settings & Info - Add overlay image**" and then click "**Select...**" to choose an image from your computer. If you want to add some effects to the image, check "**Add filter effects to overlay**". In "**Misc**" you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording. Click the round button to switch preview on/off. You can also click "**Audio record**" button to switch audio recording on/off. To show/hide the cursor activity, click the button of "**Record cursor**".

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

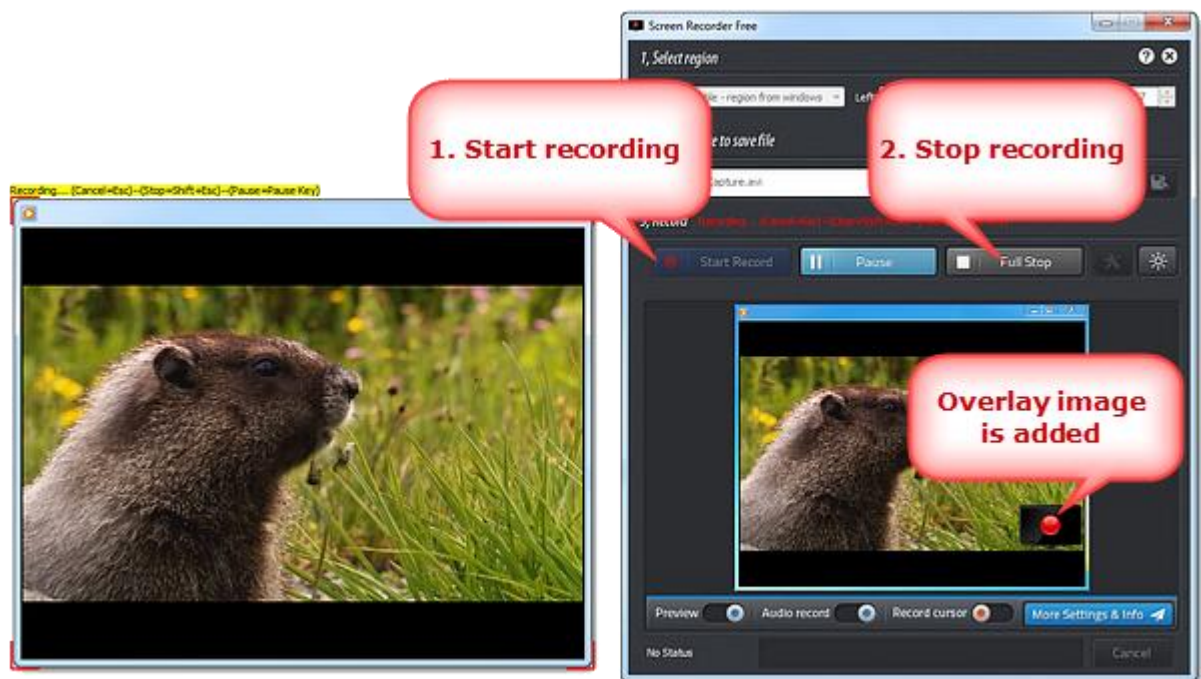

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click "**Start Record**". Move the cursor until the area or window highlighted. Click "Ctrl + Enter" to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click "**Pause**" while "**Full Stop**" to stop and store it.

## How to Capture Video and Audio Synchronously?

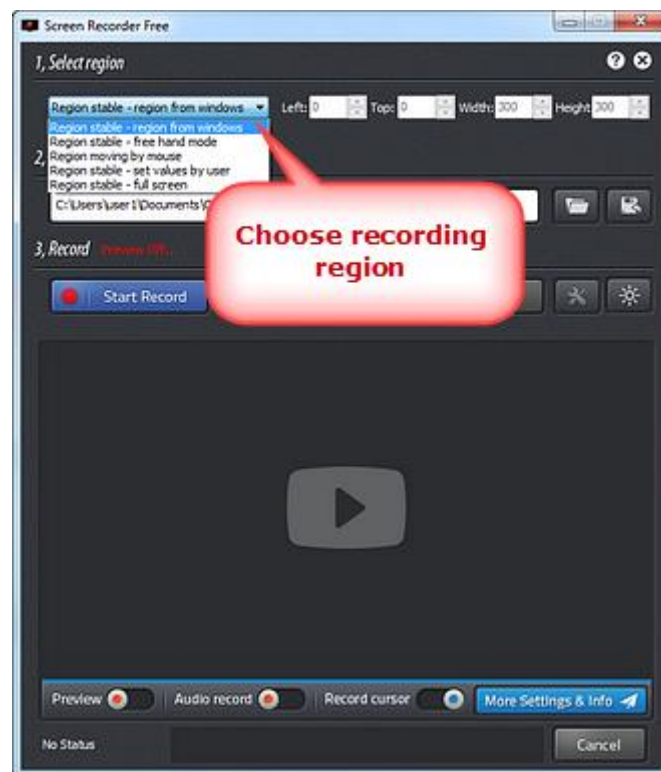

While watching YouTube videos or some other online videos, like imbedded news videos, films made with Flash, and so on, we always find ourselves wishing we could record and save them to hard disk for future reference. Fortunately, it's possible to record all of these things with Screen Recorder Free. [Download](#) it to **capture video and audio synchronously** to the video recording.

---

## Easy Steps are Here:

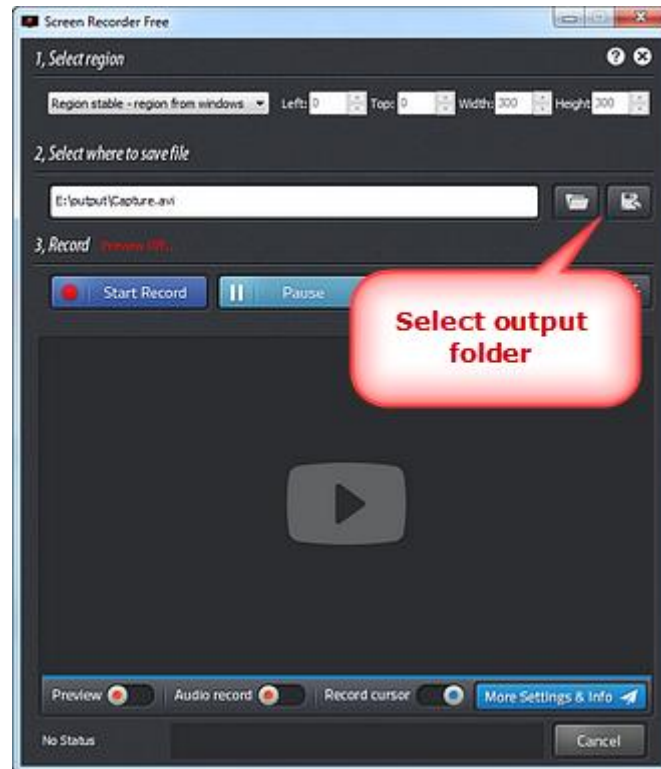

### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to choose the recording region you need to record.

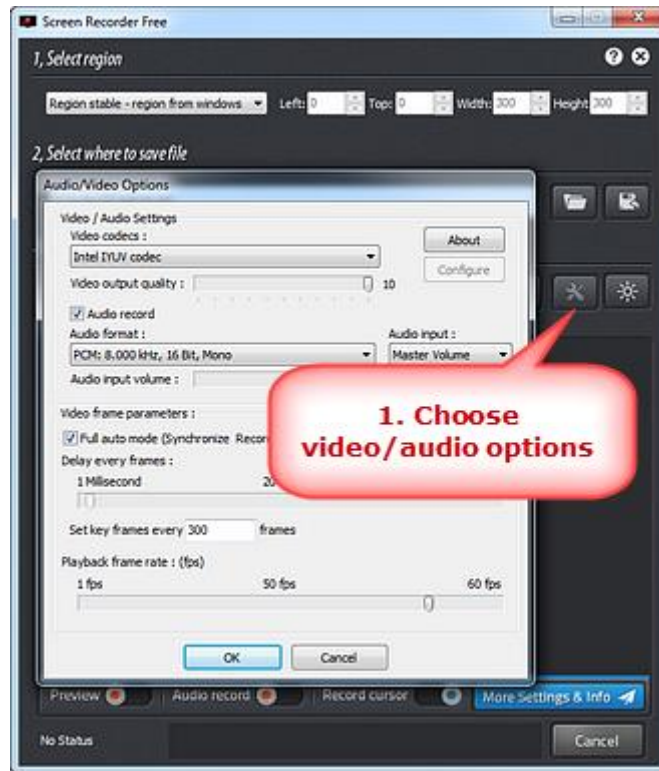

### Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

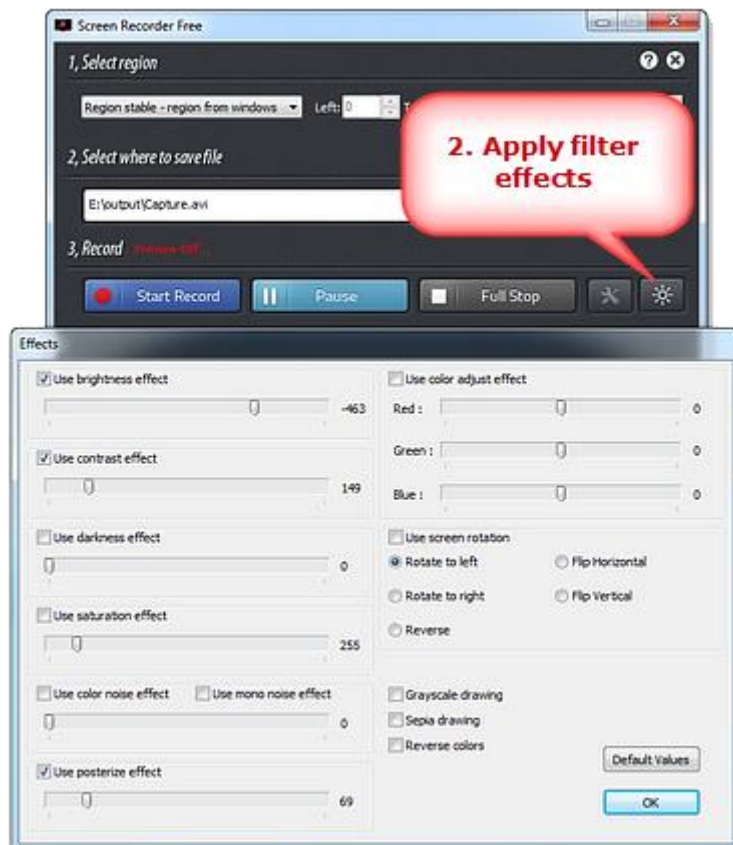

### Step 3. Specify the Recording Settings

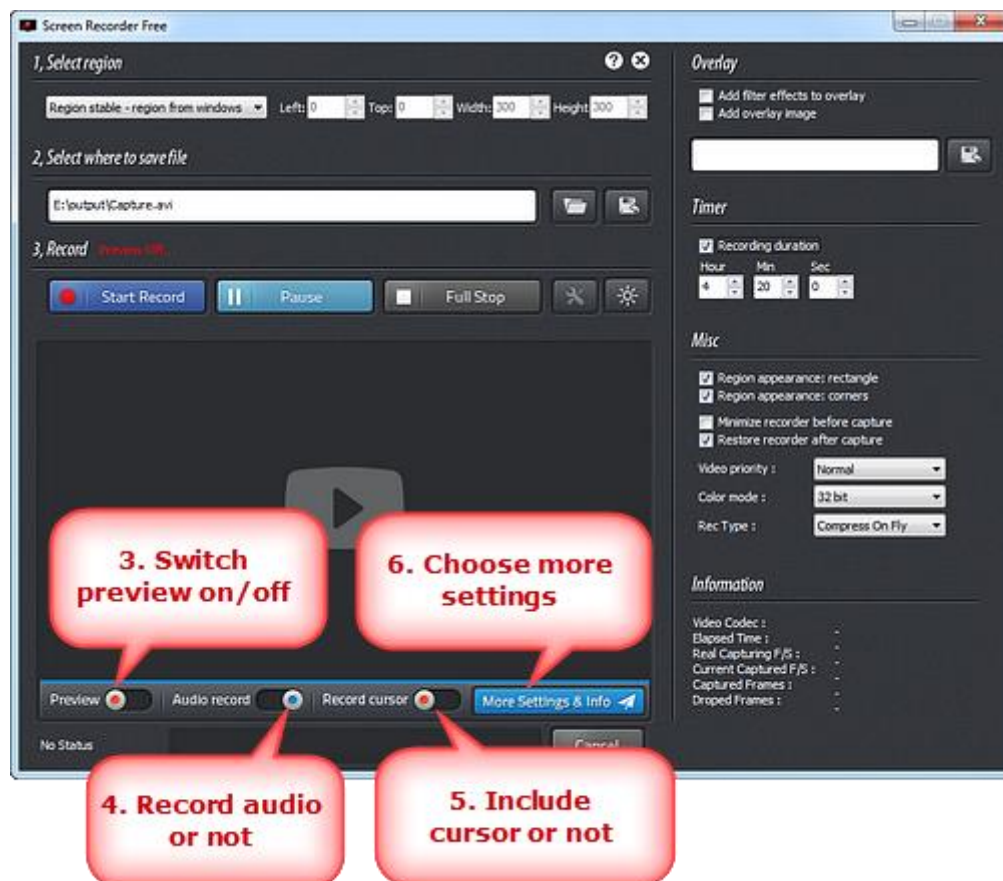

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

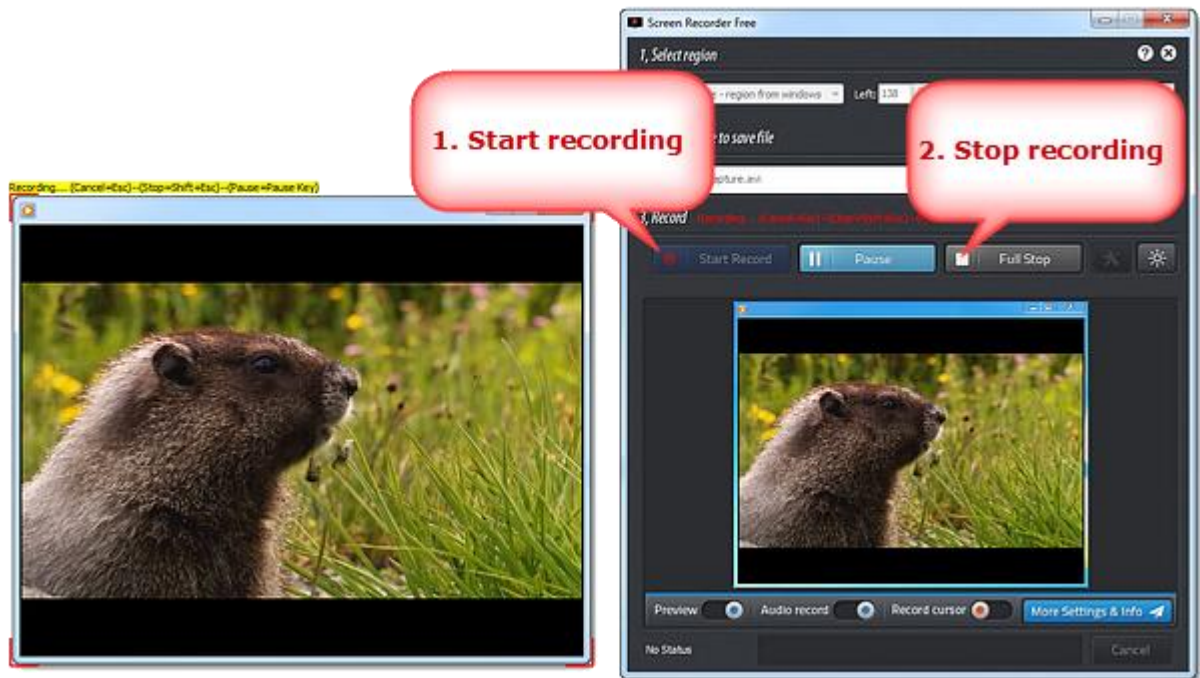

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click "Ctrl + Enter" to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Record Video in a Mouse-Tracking Region?

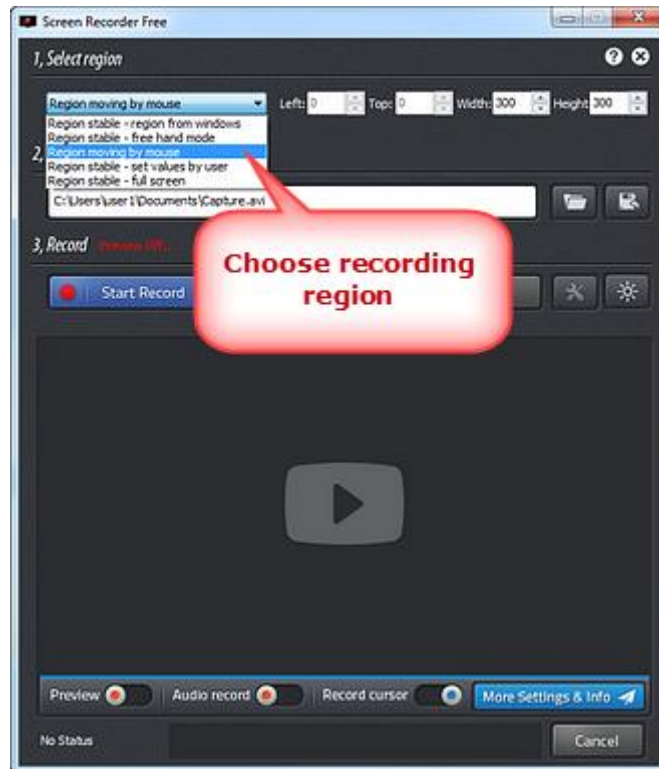

Screen Recorder Free is a flexible screen recorder program. The "**Region moving by mouse**" mode allows you to record events across a large screen even when the recording window is smaller than the size of the screen as the recording window will automatically move along with the pointer whenever you move the mouse during recording. [Download](#) it to **record video in a mouse-tracking region**.

---

### Easy Steps are Here:

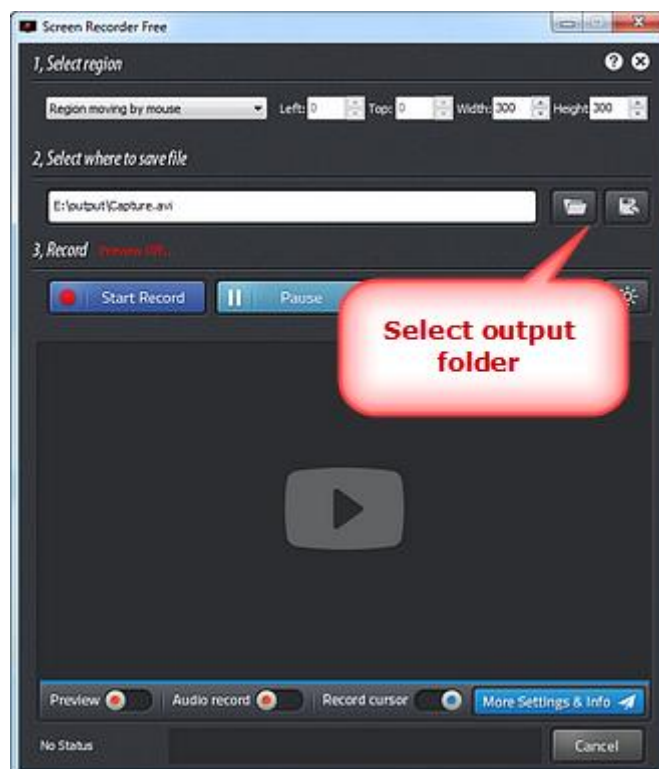

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to check the "**Region moving by mouse**" and then the capture region will follow the cursor wherever it goes during recording.

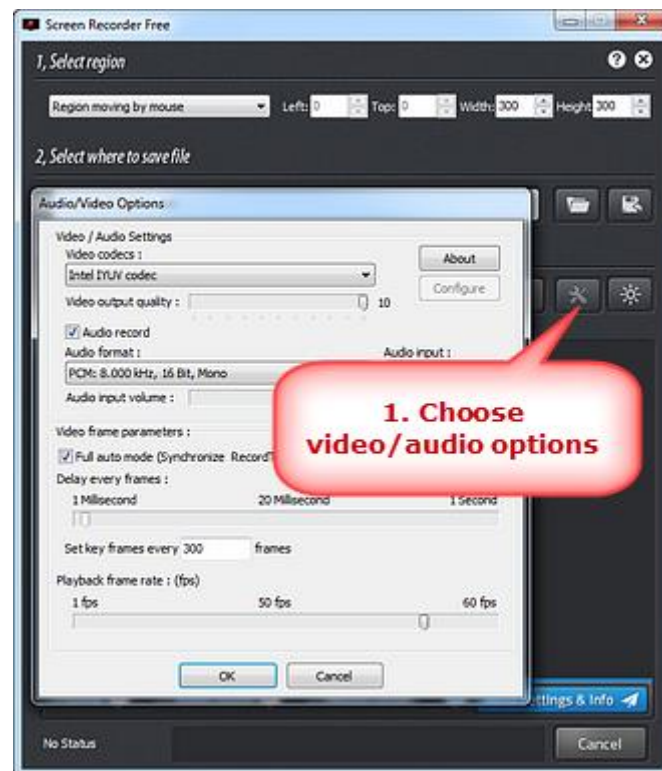

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

### Step 3. Specify the Recording Settings

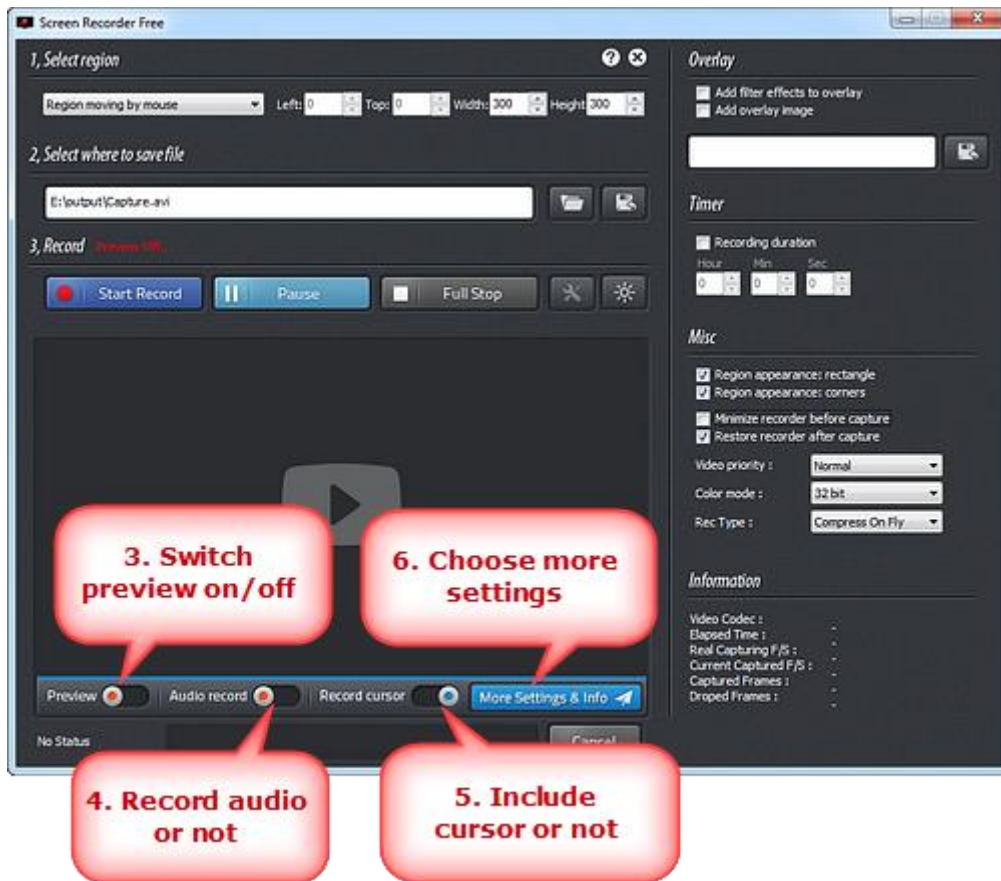

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. # How to Record Your Voice and Screen at the Same Time?

Have you ever wanted to record your own narration or other voiceover to accompany the video being recorded so that you can share and upload it on social network sites? **Screen Recorder Free** can now make simultaneous screen recording and voice recordings for "live commentary" purposes. [Download](#) it to **record your voice and screen at the same time**.

---

## Easy Steps are Here:

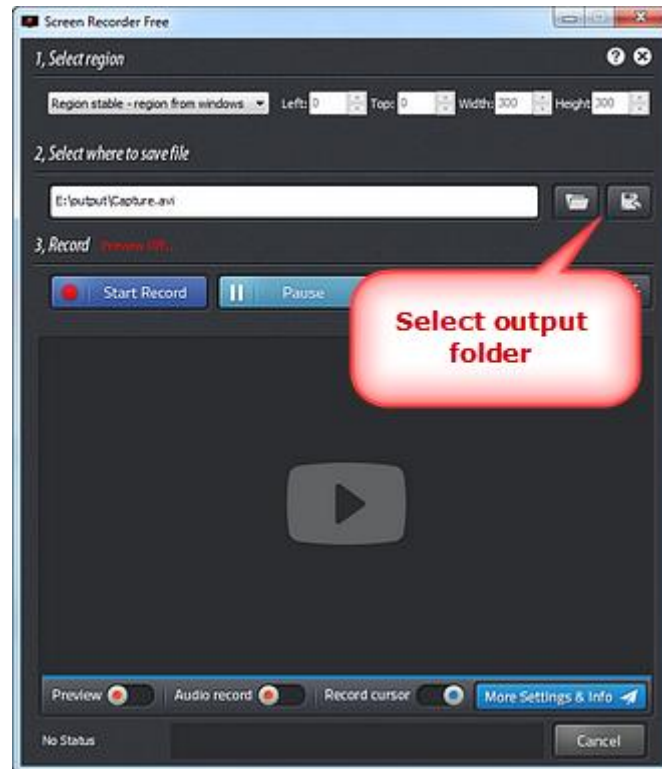

### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to choose the recording region you need to record.

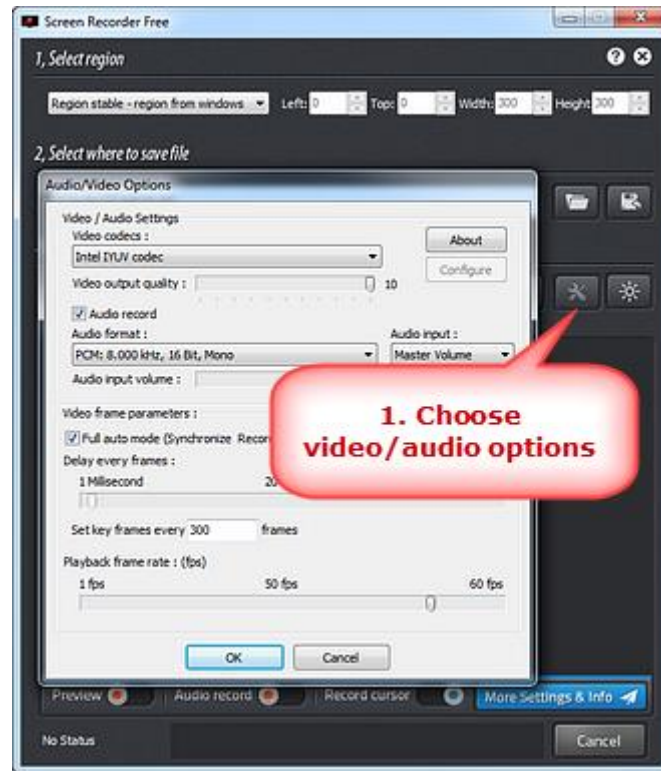

### Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

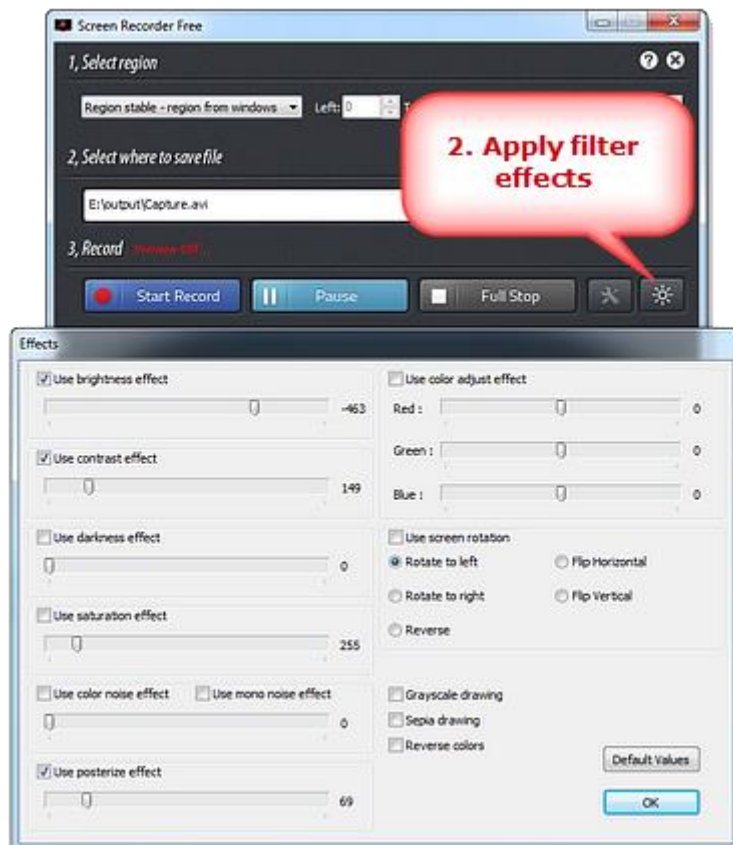

### Step 3. Specify the Recording Settings

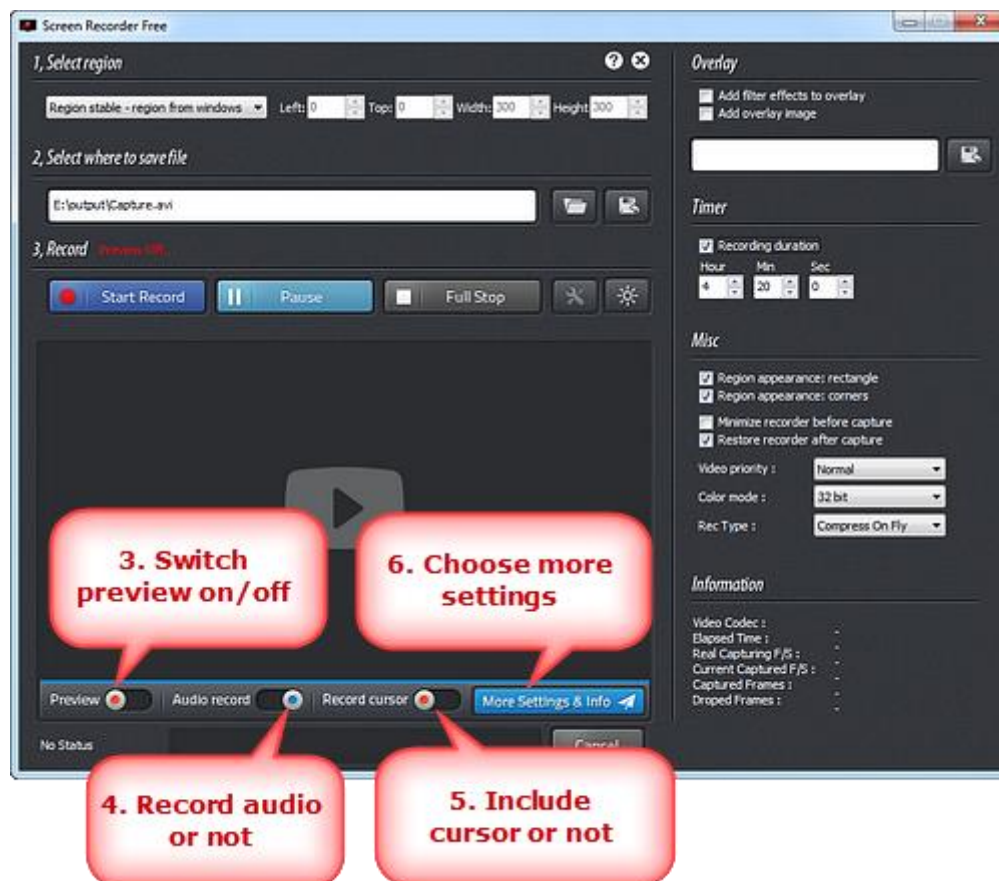

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

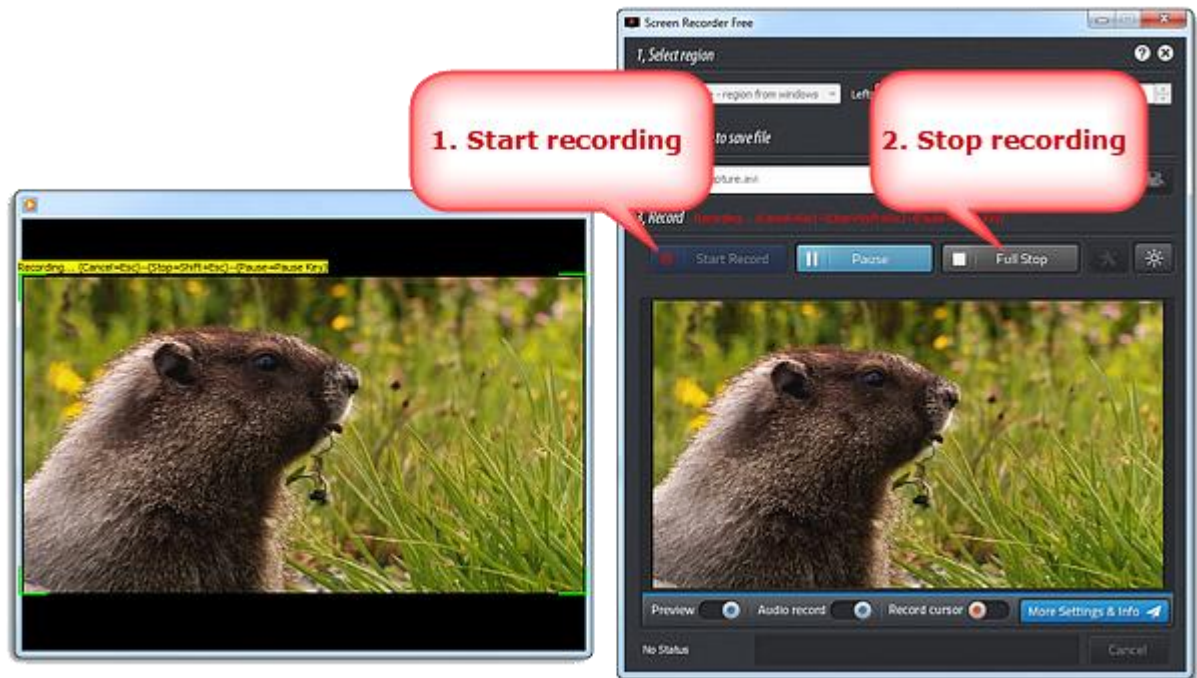

Click the round button to switch preview on/off. You can also click **"Audio record"** button to switch audio recording on/off. To show/hide the cursor activity, click the button of **"Record cursor"**. To add an overlay, superimposing a picture to the recording, click **"More Settings & Info - Add overlay image"** and then click **"Select..."** to choose an image from your computer. In **"Misc"** you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click **"Start Record"**. Move the cursor until the area or window highlighted. Click "Ctrl + Enter" to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click **"Pause"** while **"Full Stop"** to stop and store it.

## How to Set Recording Duration?

With **Screen Recorder Free** you can assign a specific duration to the screen recording. The duration specifies how much time the recording will last. This is very handy for recording live streams. [Download](#) it to **set recording duration** to the video recording.

---

### Easy Steps are Here:

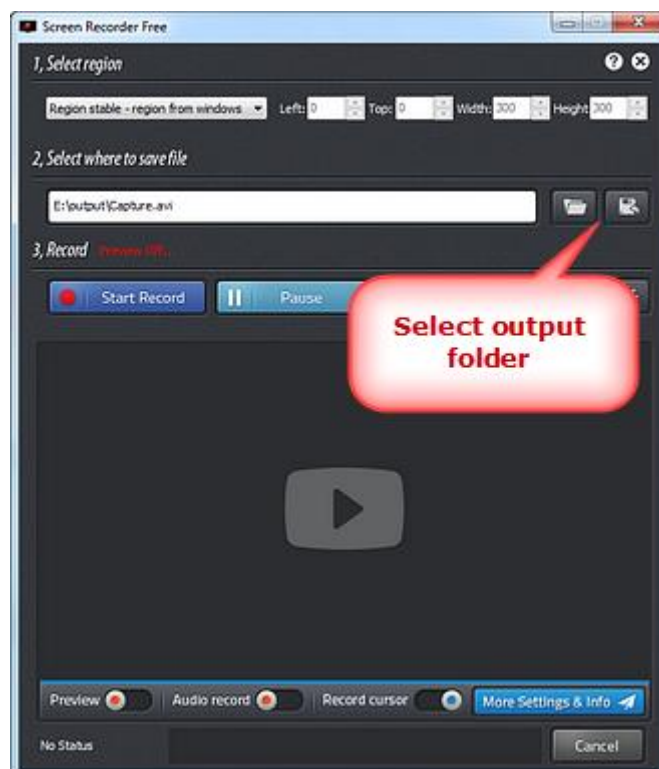

#### Step 1. Select Recording Region

Click the "**Select region**" drop-down menu to choose the recording region you need to record.

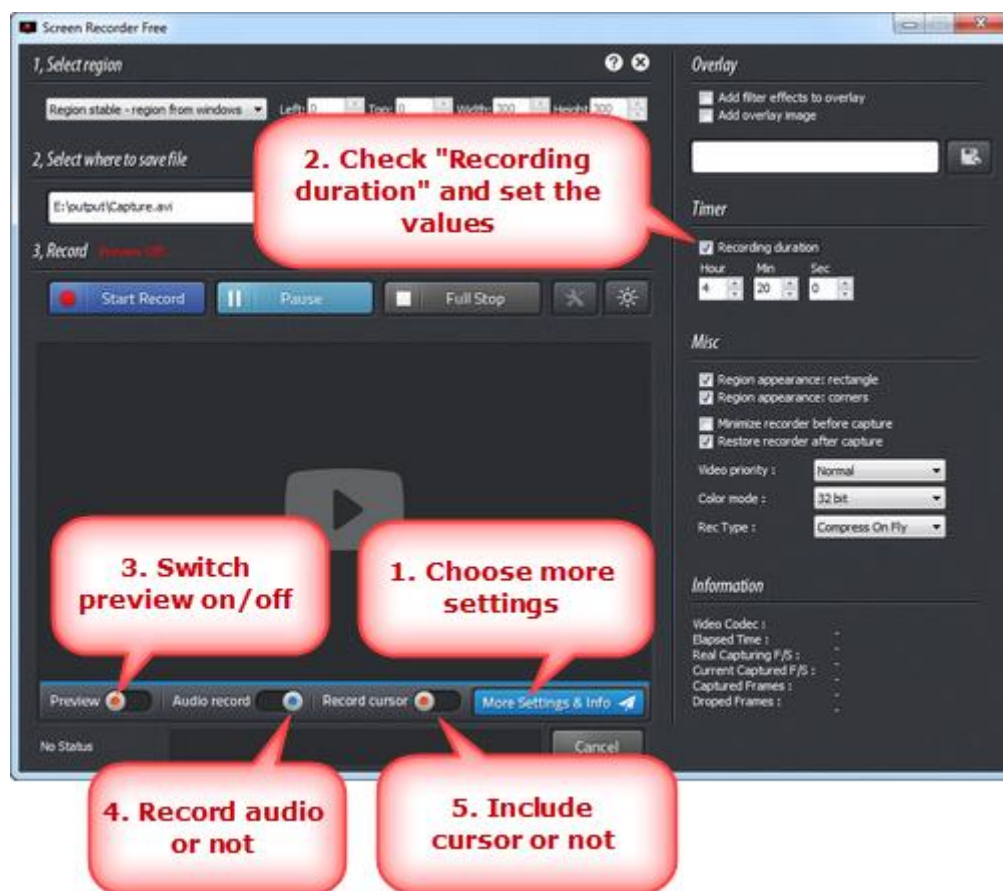

## Step 2. Choose File Folder

Click "**Open Folder**" or "**Select...**" button to **choose a folder** to save the recording video.

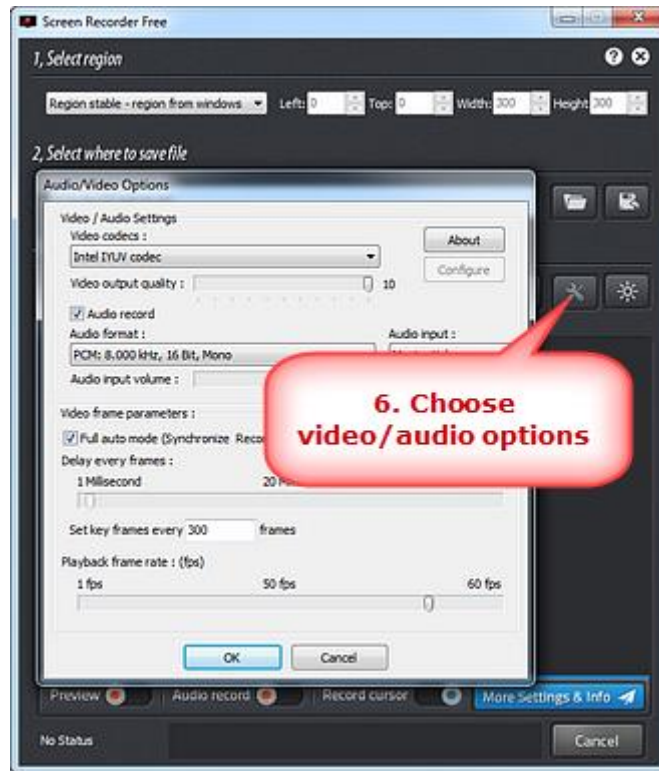

### Step 3. Specify the Recording Settings

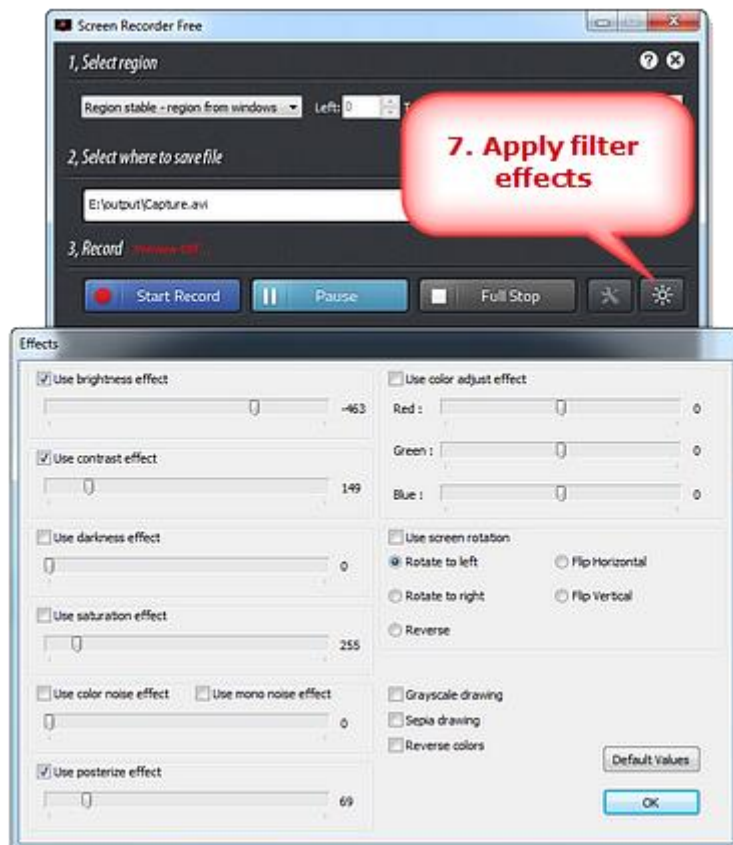

Click "**More Settings & Info**" to expand the list and in the Timer section, check "**Recording duration**" and then set the Hour, Min and Sec. To add an overlay, superimposing a picture to the recording, check "**Add overlay image**" and then click "**Select...**" to choose an image from your computer. In "**Misc**" you can also choose recording region appearance as rectangle or corners, minimize the recorder before recording and restore it after recording. Click the round button to switch **preview** on/off. You can also click "**Audio record**" button to switch audio recording on/off. To show/hide the cursor activity, click the button of "**Record cursor**".

Click "**Audio Video Options**" button to specify the audio/video settings. **Choose the video codecs** from its drop-down list and drag the slider to specify the video output quality. If needed, click "**Configure**" to set compress mode. Check "**Audio record**" if you want to record the audio and then set audio format, audio input and sound volume.

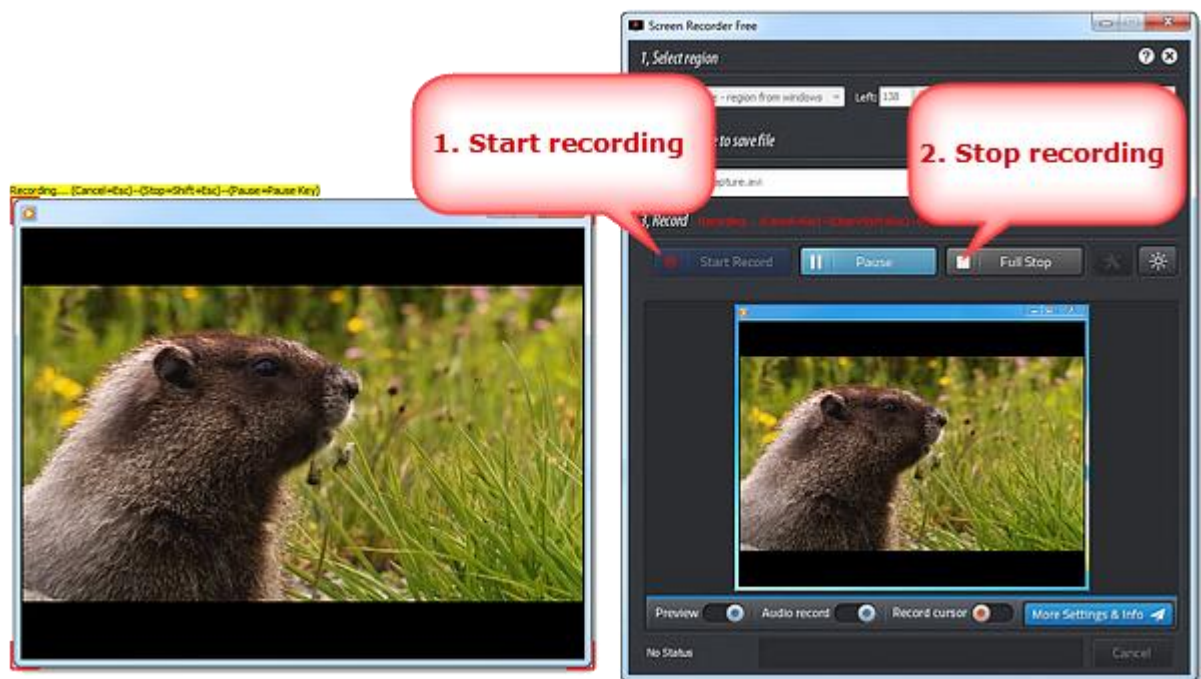

Click "**Filter Effects**" to **add effects** like brightness, contrast, darkness, saturation, etc. to make the recording more animated and interactive.

#### Step 4. Start Recording

When everything is set, play the video you want to record and click "**Start Record**". Move the cursor until the area or window highlighted. Click "Ctrl + Enter" to specify the recording region. The recording is started and there's a flashing rectangle around the recording region. If you want to temporarily stop the recording, click "**Pause**" while "**Full Stop**" to stop and store it.

## More Features
